WHAT IS AÇANA QR CODE GENERATOR?

WHAT IS «AÇANA QR CODE GENERATOR» ?

Generates a QRCode from any text string or vCard file and save it as a BPM, GIF, JPG, JPEG2000, PNG, TGA, TIFF, WebP, EPS, SVG, PDF or vCard file.

Features:

- Support Touch Bar
- Support macOS Dark Mode
- Support Retina Display
- Error correction version 1 and version 2
- Generates a QRCode from any text string
- Generates a QRCode for:
 - URL
 - MeCard
 - vCard (manual or per Drag and Drop from a vCard file)
 - Event (manually or by drag and drop from an .ics file)
 - E-mail
 - Manage e-mail templates
 - Phone call
 - Phone call
 - FaceTime®
 - WhatsApp®
 - SMS
 - Messages
 - Discord®
 - Line®
 - Telegram®
 - Viber®
 - WeChat®
 - WhatsApp®
 - WiFi connection
 - Social media
 - Facebook®
 - Flickr®

WHAT IS AÇANA QR CODE GENERATOR?

- Instagram®
- LinkedIn®
- Reddit®
- Snapchat®
- TikTok®
- X (Twitter®)
 - Tweet
 - Link to your account
- Xing®
- YouTube®
- Lifestyle
 - Dribbble®
 - DoorDash®
 - OnlyFans®
 - OpenTable®
 - Pinterest®
 - SoundCloud®

- Code 128 Subset B
- Code 128 automatic subset switching
- Code 3 of 9 Code 39
- Code 32
- Code 93
- EAN-14
- EANX
- Extended Code 3 of 9 Code 39+
- HIBC Aztec Code
- HIBC Code 128
- HIBC Code 39
- HIBC QR Code
- ITF-14
- LOGMARS
- NVE-18
- PZN
- QR Code
- UPC A
- UPC E
- UPCA Check
- UPCE Check
- UPNQR
- USPS One Code
- Vin

APPLICATION START

APPLICATION START

After the start, you see the main window with these categories.

- Text
- URL
- Contacts
- Event
- E-mail
- Phone
- SMS
- Messenger
- WiFi
- Social media
- Location
- Geo location
- Apps
- Money
- Meeting
- Read Barcode and QR Codes

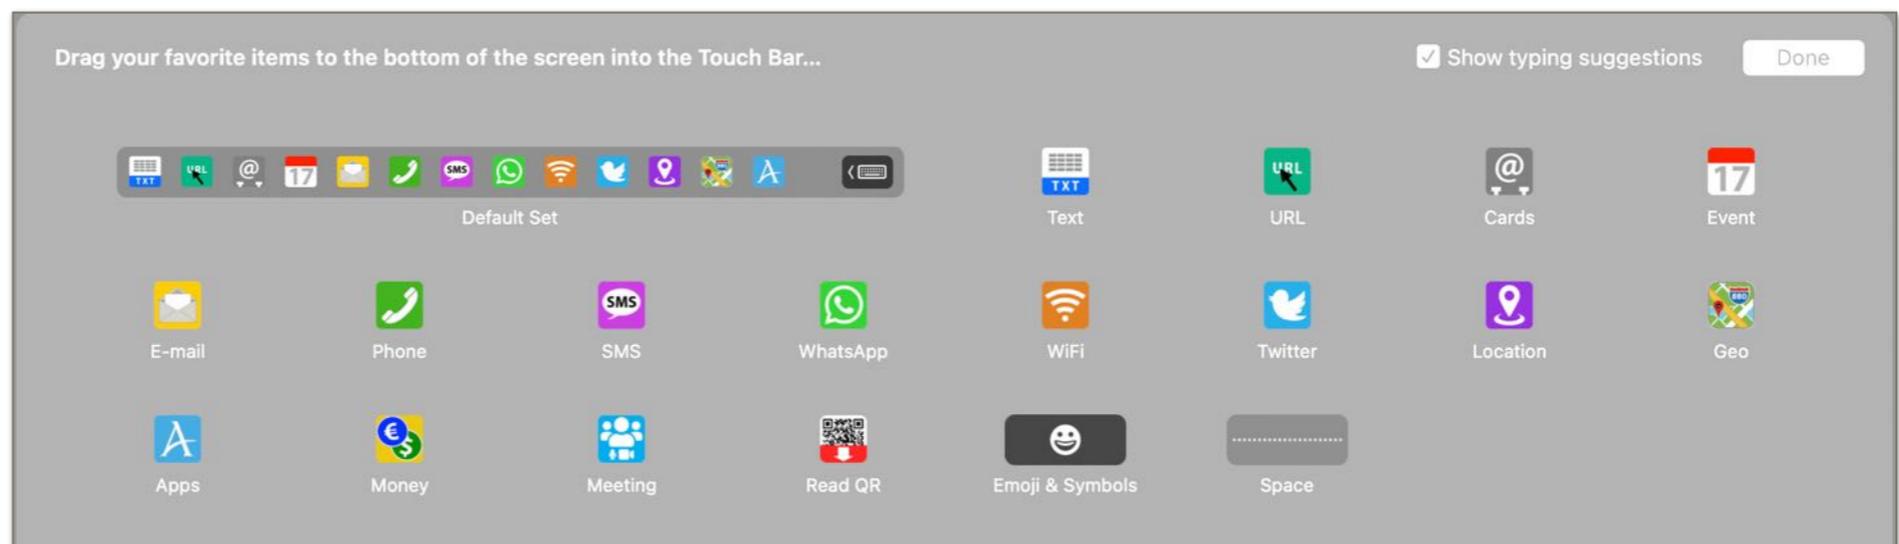

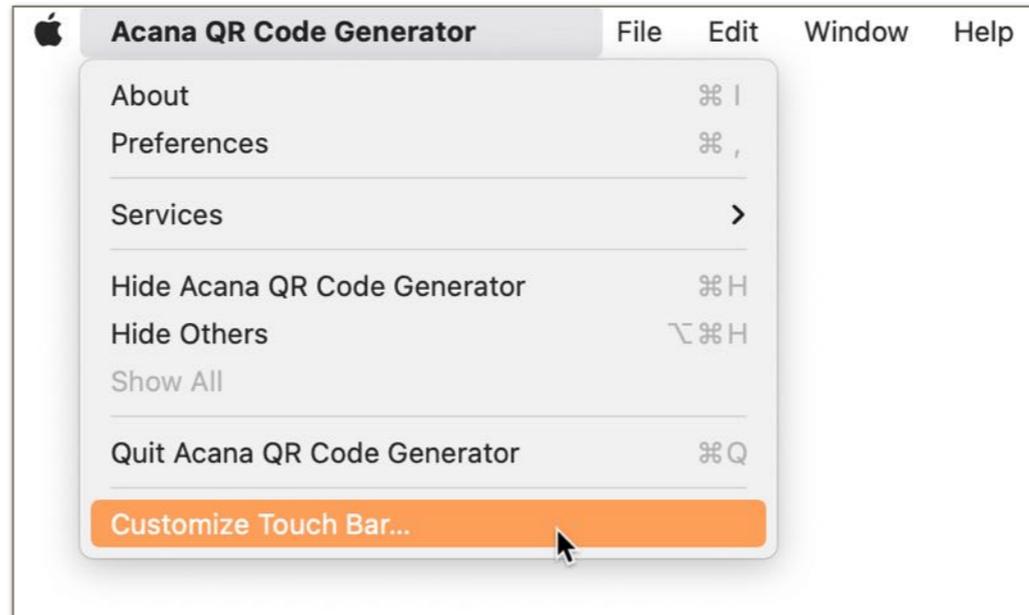

TOUCH BAR

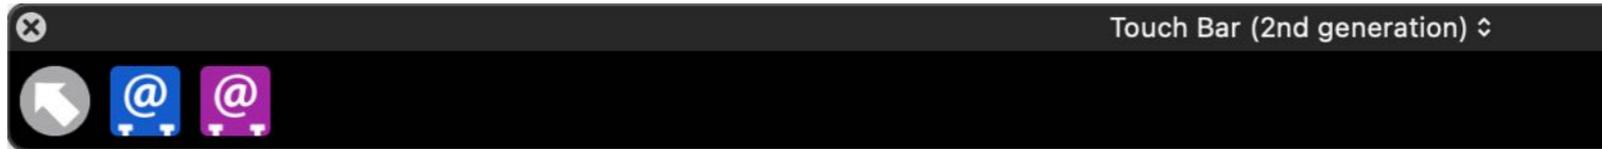

If your Mac has a Touch Bar, you can use the following functions. These functions are identical to those in the toolbar menu.

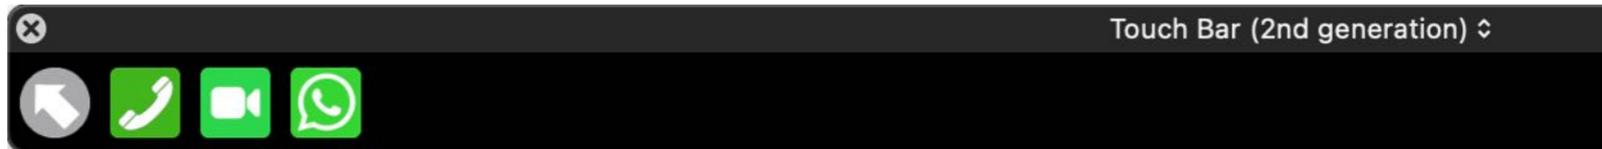

In the menu "Acana QR Code Generator => Customize Touch Bar" you can customize the touch bar.

With the icon „Cards“ the features for „MeCard“ and „vCard“ are available.

With the icon „Phone“ the features for a phone call are available.

With the icon „Messenger“ the features for messenger are available.

With the icon „Social Media“ the features for money transfer are available.

The functions for the lifestyle media can be accessed via the "Lifestyle" icon.

The functions for creating a link to an app in the AppStore can be accessed via the "Apps" icon.

With the icon „Money“ the features for money transfer are available.

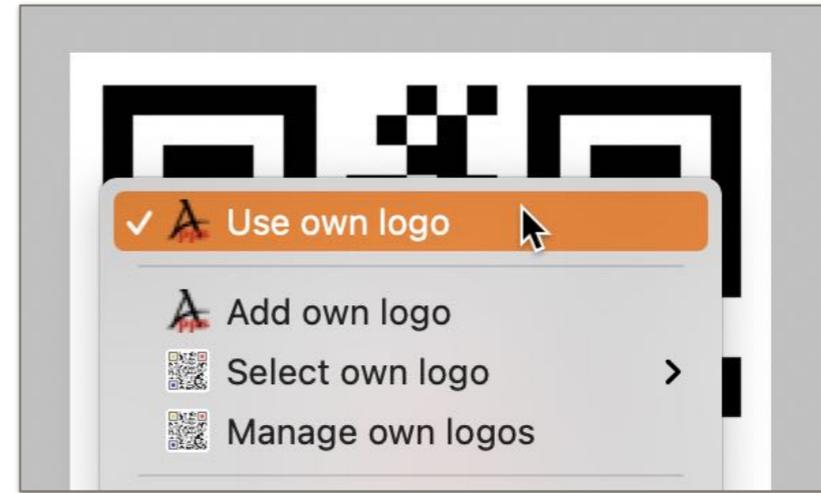

With the icon „Meeting“ you can call up the functions for meetings.

ADD YOUR OWN LOGO TO A QR CODE

ADD YOUR OWN LOGO TO A QR CODE

You can add a picture to any QR code. This picture will be saved automatically in your preferences and can be re-used on the next startup. First make sure that the export format is not "Swiss Code QR", PDF, EPS or SVG. Select „Add Picture“ from the context menu and choose a picture. You can add a picture to any QR code.

After you have selected a picture, the icon in the context menu has now your selected picture. Now activate „Use User Picture“ from the context menu. The picture is now placed in the center of the QR Code.

QR Code with picture is not supported for export as "Swiss Code QR", PDF, EPS and SVG. These export formats save the QR code without the picture.

ADD YOUR OWN LOGO TO A QR CODE

When using an image, it may be necessary to increase the error correction. This can be done in the [preferences](#) in section "Error" with "Option 1" or "Option 2".

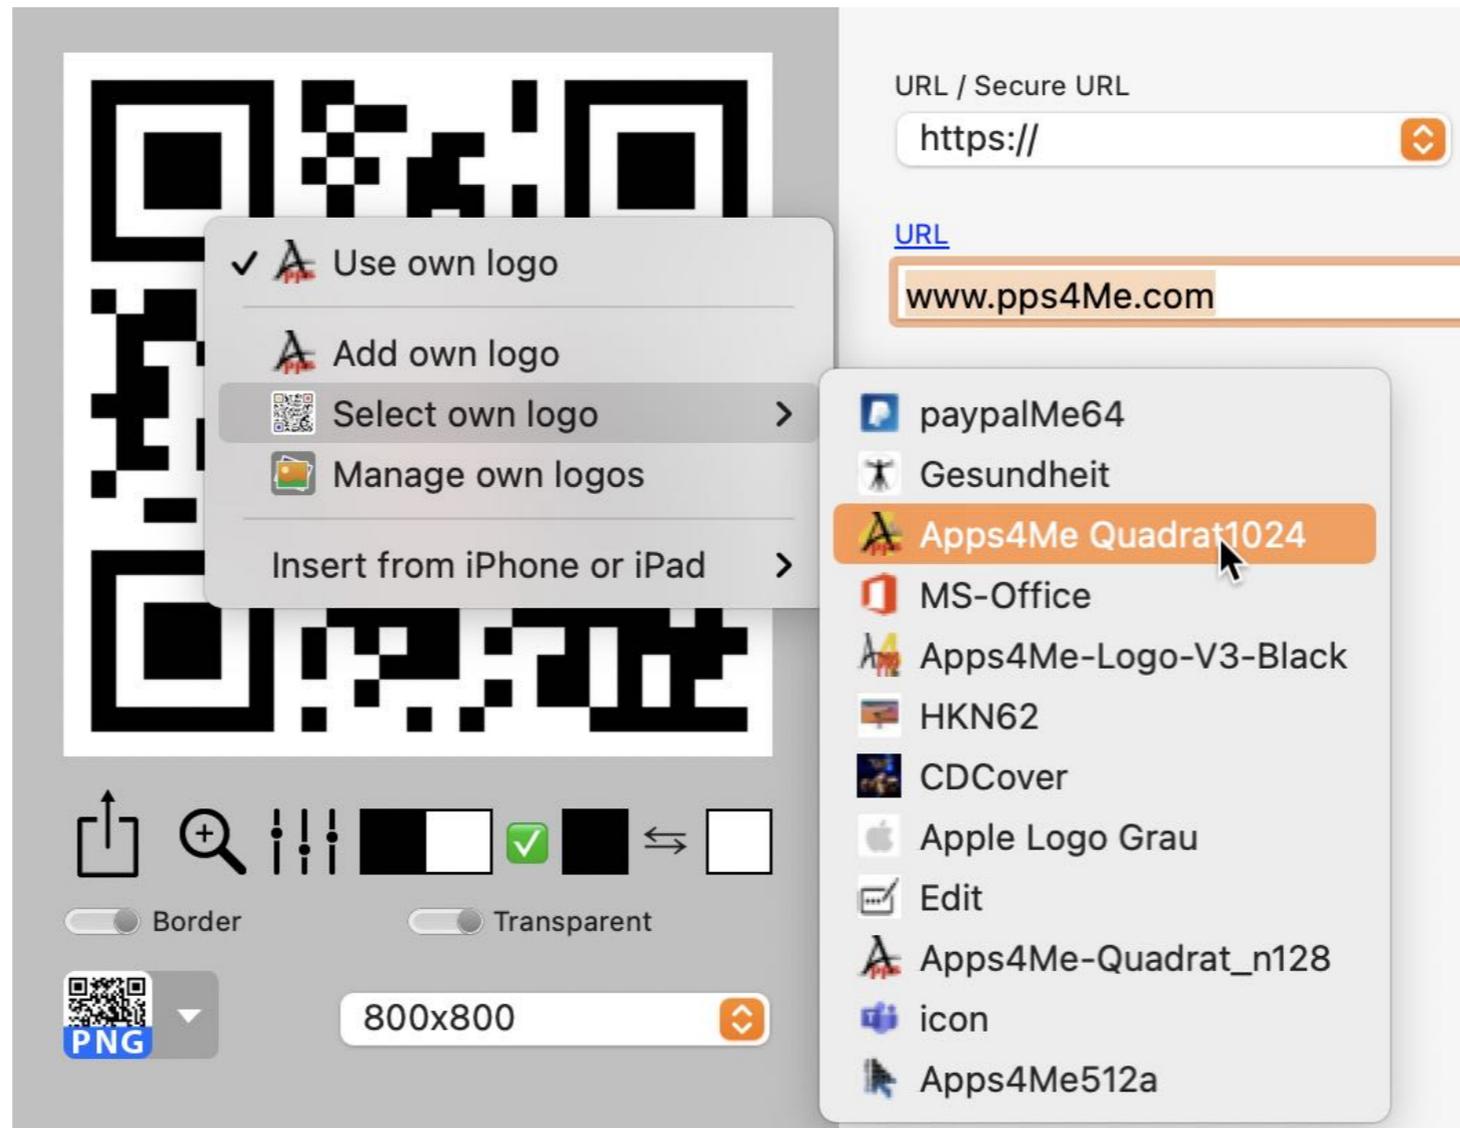

Reason:

The smaller the error correction is, the less squares a QR Code contains. If now some of these few squares are covered by an image, the QR Code can no longer be read without errors. If the error correction is increased, the QR code contains more squares and the QR code can be read without errors again.

USE A DIFFERENT LOGO FOR QR CODE

USE A DIFFERENT LOGO FOR QR CODE

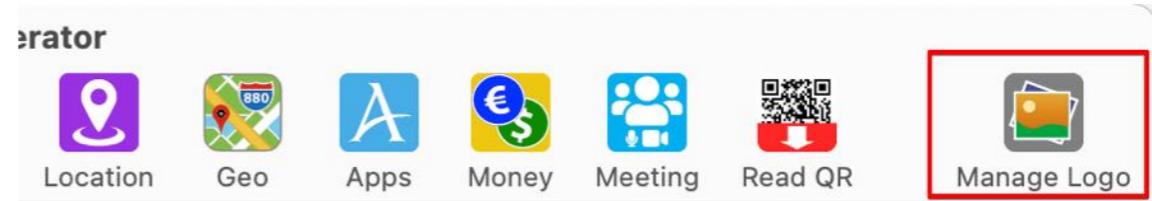

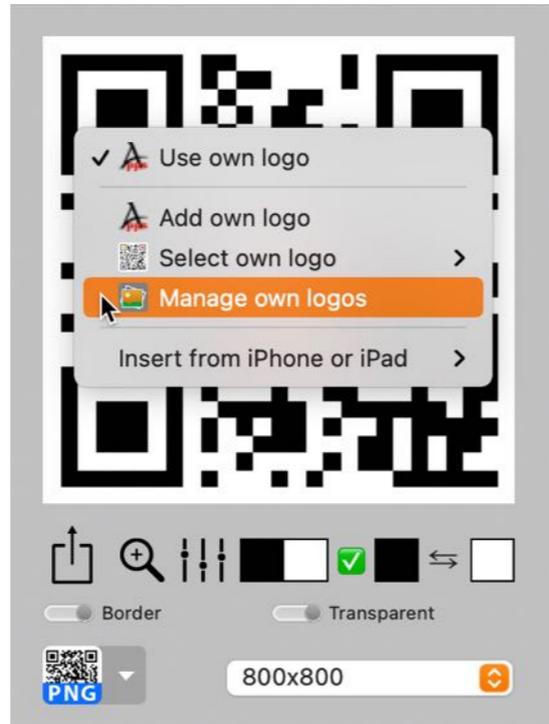

If you have already added several logos, you can select one of them directly from the context menu.

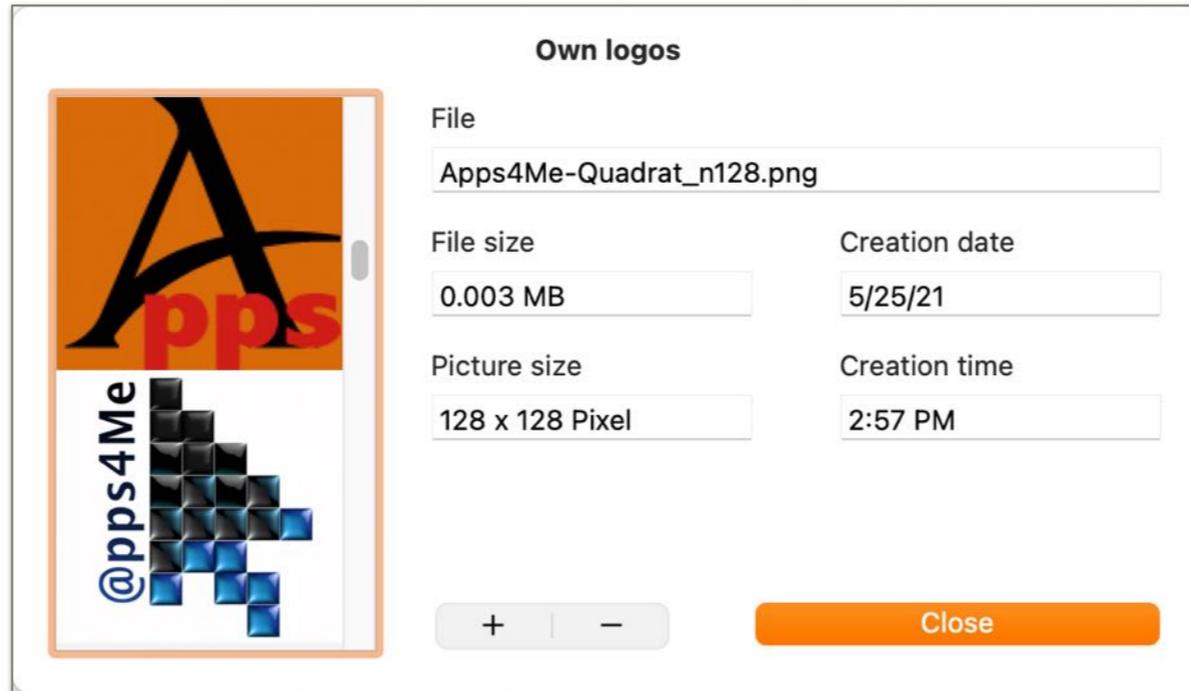

MANAGE YOUR OWN LOGOS

MANAGE YOU OWN LOGOS

You can manage your own logos. To do this, select "Manage your own logos" from the context menu or click on the icon „Manage Logo“ from the toolbar menu.

Here you can add, delete or rename your own logos.

CREATE A QR CODE FROM A TEXT

CREATE A QR CODE FROM A TEXT

You can create a QR code from any text string. The maximum number of characters depends on the content of the text. The average is approximately 2000 to 2500 characters.

The screenshot shows the Açana QR Code Generator web application. The 'Text' tab is selected in the sidebar. The main area displays a QR code and a text input field with the following text: "Generates a QR code from any text or vCard file. The QR code can be saved as a BMP, GIF, JPG, JPEG2000, PNG, TGA, TIFF, WebP, EPS, SVG, PDF or vCard file." The settings panel includes options for 'Border' (checked), 'Transparent' (unchecked), 'Format' (PNG), and 'Export size' (512x512). A status bar at the bottom indicates 'QRCode was created' and '154 Character'.

CREATE A QR CODE FOR A URL

CREATE A QR CODE FOR A URL

You can create a QR code for a URL. With the selection menu you can choose between a none secure (http) or a secure (https) URL. With a click on "URL" the URL can be checked. The "URL" will be automatically checked if is a valid URL string.

The screenshot shows the 'Açana QR Code Generator' application window. On the left is a sidebar menu with various options: Text, URL (selected), Contacts, Event, E-mail, Phone, SMS, Messenger, WiFi, Social media, Lifestyle, Location, Geo, Apps, Money, Meeting, and Read QR. The main area displays a large QR code. Below the QR code are controls for 'Border' (checked), 'Transparent' (unchecked), 'Format' (set to PNG), and 'Export size' (set to 512x512). On the right, the 'URL' section has a dropdown menu for 'URL / Secure URL' set to 'https://' and a text input field containing 'https://pps4Me.com'. A status bar at the bottom of the window reads 'QRCode was created'.

CREATE A QR CODE FOR A VCARD CONTACT

CREATE A QR CODE FOR A VCARD CONTACT

Here you can create a QR code for a vCard (contact for the address book). Select "Cards" and then "vCard" from the toolbar menu. You can also drag an existing vCard file to the application window. No matter what category (text, email or SMS etc.) you are in, the data from the vCard file will be read, entered into the event fields and the QR code will be created.

CREATE A QR CODE FOR AN EVENT

CREATE A QR CODE FOR AN EVENT

You can create a QR code for an event.

The screenshot shows the Açana QR Code Generator interface. On the left is a sidebar with various sharing options: Text, URL, Contacts, vCard, MeCard, Event (highlighted), E-mail, Phone, SMS, Messenger, WiFi, Social media, Lifestyle, Location, Geo, Apps, and Money. The main area displays a QR code with a 'pps' logo in the center. Below the QR code are controls for 'Border' (checked), 'Transparent' (unchecked), 'Format' (set to PNG), and 'Export size' (set to 512x512). On the right, the 'Event' configuration panel includes fields for Title ('Training macOS 13'), Location ('Frankfurt'), URL ('https://www.pps4Me.com'), Start date and time ('9/11 /2023 10 :00:00'), and End date and time ('9/15 /2023 17 :00:00'). There is also a note field containing '2. training for macOS 13 in 2024' and a checkbox for 'Without local time zone «Europe/Berlin»'.

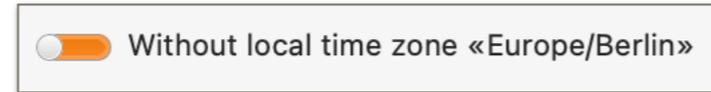

You can set the date a time to today and the current time in the fields for „Start“ and „End“. Select „Today“ and „Now“ from the context menu.

This close-up shows the date and time selection interface. The 'Start' field has a date of '4/' and a context menu open with 'Today' and 'Now' options. The 'End' field shows a date of '6/18 /2021' and a time of '17 :00:00'.

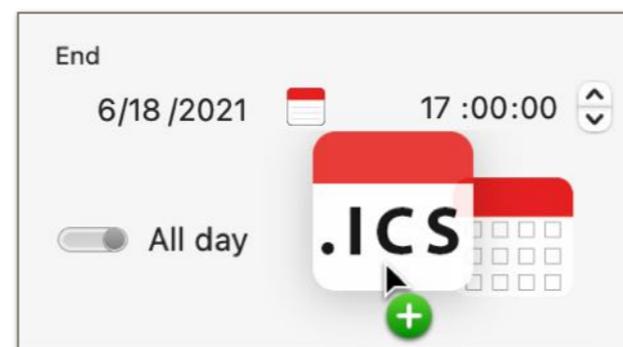

CREATE A QR CODE FOR AN EVENT

Some QR Code reader can't handle the time zone in for an event. If you scan a QR code and the time values for start and end is not the same that you have entered in «QR Code Generator», switch on or off „Without local time zone“.

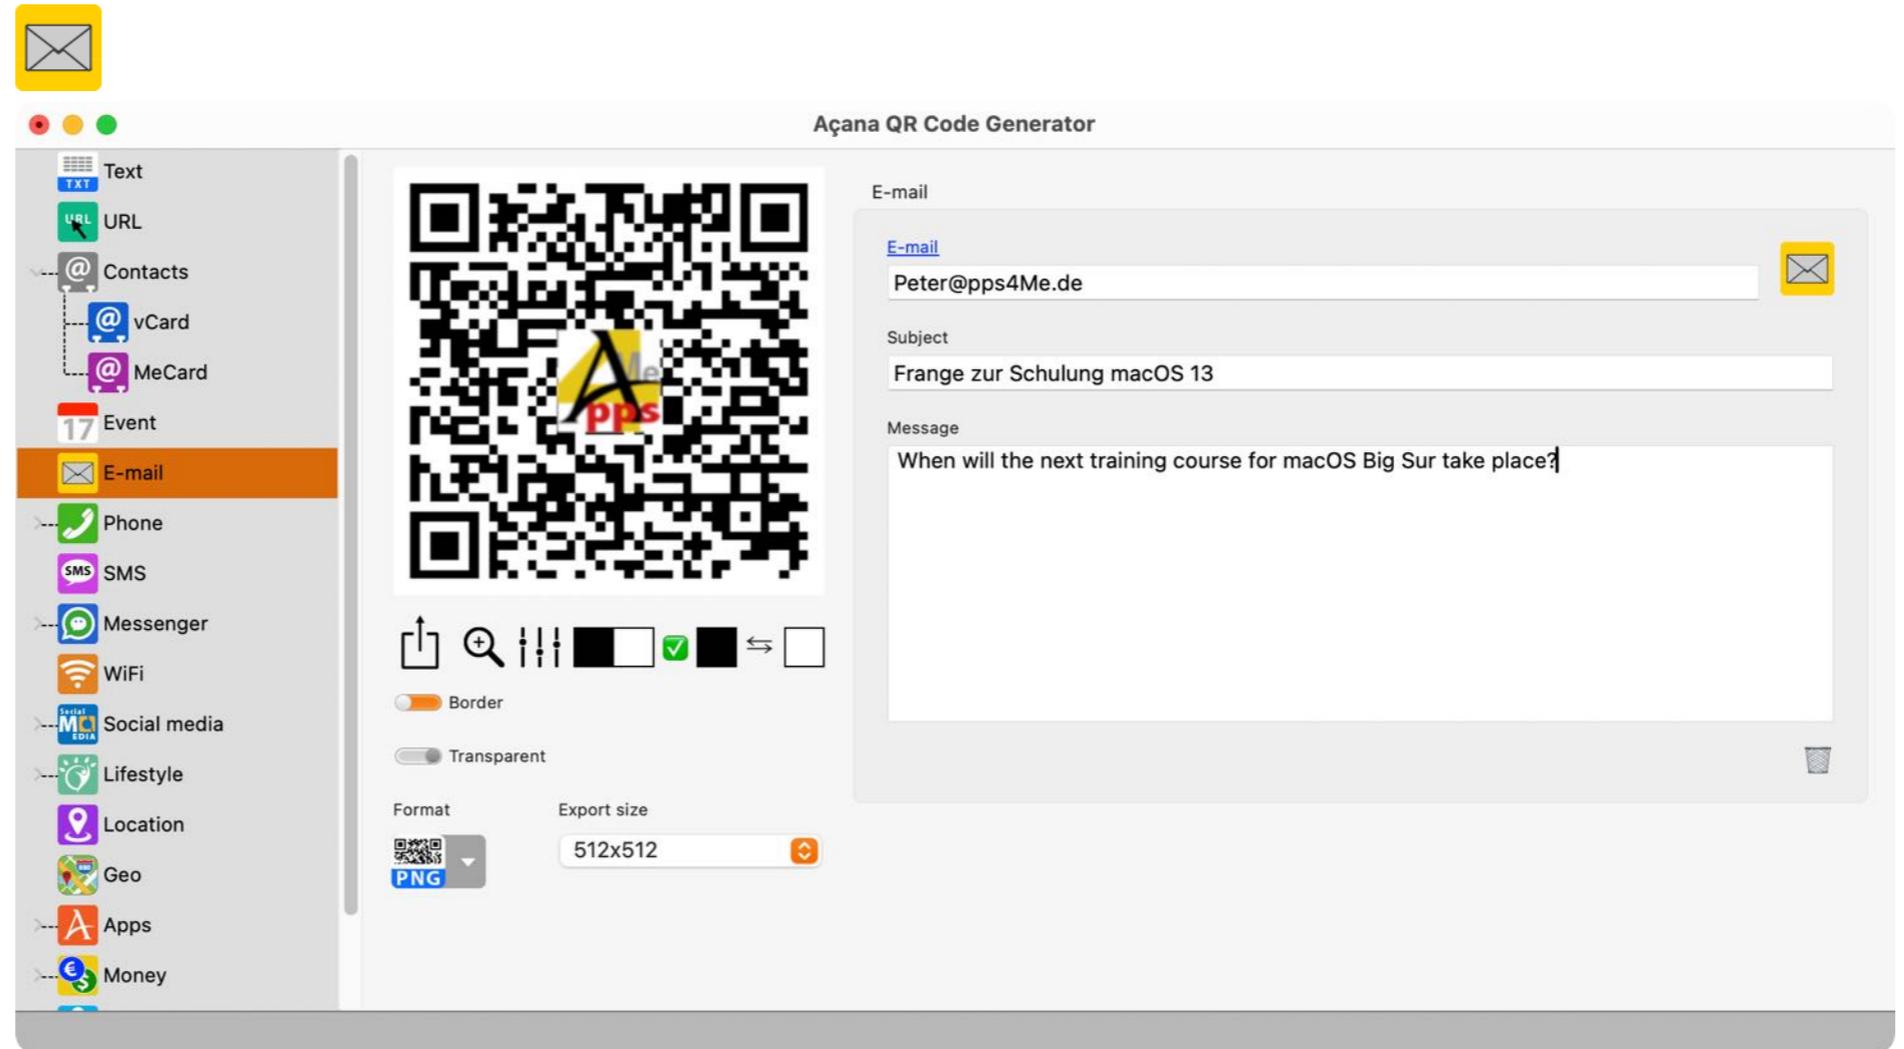

To import an event via an ".ics" file, drag it to the field with the calendar icon. Or drag the calendar icon into the Finder to save the event as an .ics file. You can export or import an .ics file via the context menu.

A screenshot of the event creation form. The form has several fields: Title (macOS Training), Location (Vancouver), URL (https://www.pps4Me.com), Start (6/13 /2021 9:00:00), End (6/18 /2021 17 :00:00), and Message (2nd macOS training in 2021). There is an "All day" toggle switch and a calendar icon. A context menu is open over the calendar icon, showing options: "Drop .ics event file here", "Drag as .ics event file", and "Context menu for import/export". At the bottom of the form, there is another "Without local time zone «Europe/Berlin»" toggle switch and a trash icon.

CREATE A QR CODE FOR AN E-MAIL

CREATE A QR CODE FOR AN E-MAIL

You can create a QR code for an e-mail.

The screenshot shows the Açana QR Code Generator interface. On the left, a sidebar lists various QR code types: Text, URL, Contacts, vCard, MeCard, Event, E-mail (highlighted), Phone, SMS, Messenger, WiFi, Social media, Lifestyle, Location, Geo, Apps, and Money. The main area displays a QR code with a watermark logo. Below the QR code are options for 'Border' (checked), 'Transparent', 'Format' (set to PNG), and 'Export size' (512x512). On the right, an 'E-mail' form is filled out with the following details:

- To: Peter@pps4Me.de
- Subject: Frange zur Schulung macOS 13
- Message: When will the next training course for macOS Big Sur take place?

MANAGE E-MAIL TEMPLATES

MANAGE E-MAIL TEMPLATES

To create a QR code for an e-mail, you can save templates and call them up again with a mouse click. To do this, click on the e-mail icon.

To save the current e-mail as a template, select "Add to e-mail Templates" from the menu. To select an existing template, choose the appropriate entry from the menu.

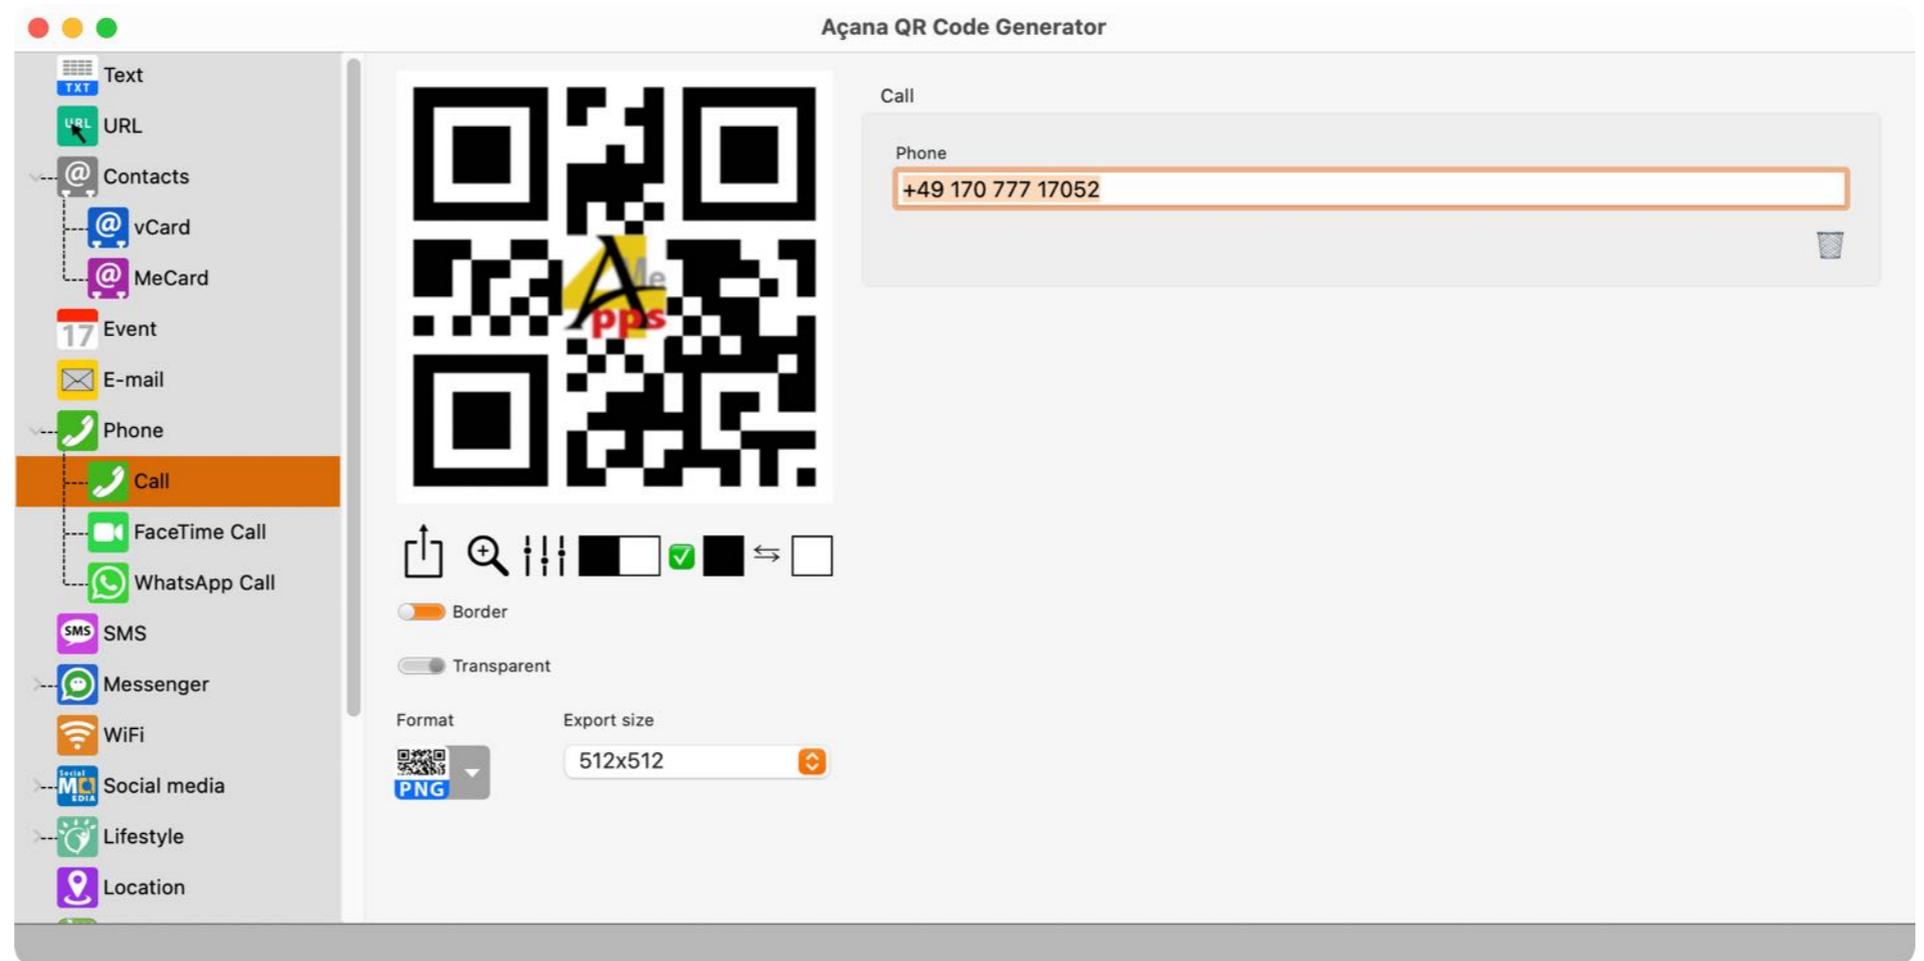

To manage the templates, select "Manage e-mail templates" from the menu.

CREATE A QR CODE FOR A PHONE CALL

CREATE A QR CODE FOR A PHONE CALL

You can create a QR code for a phone call.

The screenshot shows the Açana QR Code Generator web application. On the left, a sidebar menu lists various QR code types: Text, URL, Contacts, vCard, MeCard, Event, E-mail, Phone, Call (highlighted), FaceTime Call, WhatsApp Call, SMS, Messenger, WiFi, Social media, Lifestyle, and Location. The main area displays a large QR code with a watermark 'Açana pps'. Below the QR code are settings for 'Call', including a 'Phone' input field containing '+49 170 777 17052'. Additional settings include 'Border' (checked), 'Transparent' (unchecked), 'Format' (PNG), and 'Export size' (512x512).

CREATE A QR CODE FOR A FACETIME CALL

CREATE A QR CODE FOR A FACETIME CALL

You can create a QR code for a FaceTime® call.

A screenshot of the Açana QR Code Generator web application. The interface is divided into three main sections. On the left is a sidebar menu with various categories: Text, URL, Contacts (vCard, MeCard), Event, E-mail, Phone (Call, FaceTime Call, WhatsApp Call), SMS, Messenger, WiFi, Social media, Lifestyle, and Location. The 'FaceTime Call' option is highlighted in orange. The middle section displays a large QR code with a watermark logo in the center. Below the QR code are several control icons: a share icon, a magnifying glass, a vertical bar icon, a black and white square icon, a green checkmark icon, a black square icon, and a double-headed arrow icon. There are also two toggle switches: 'Border' (turned on) and 'Transparent' (turned off). At the bottom of this section are 'Format' and 'Export size' options. The 'Format' is set to 'PNG' and the 'Export size' is '512x512'. The right section is titled 'FaceTime Call' and contains a text input field labeled 'E-Mail address or phone number' with the value 'Apps@pps4Me.de' entered. A trash icon is located to the right of the input field.

The screenshot shows the Açana QR Code Generator web application. On the left is a sidebar menu with categories: SMS, Messenger, WiFi, Social media, Facebook, Flickr, Instagram (highlighted), LinkedIn, Reddit, Snapchat, TikTok, Tumblr, X, Xing, YouTube, Lifestyle, and Location. The main area displays a QR code for the Instagram profile 'apps4Me'. Below the QR code are controls for 'Border' (checked), 'Transparent' (unchecked), 'Format' (set to PNG), and 'Export size' (set to 512x512). On the right, there is an input field for 'User name' containing 'apps4Me' and a button labeled 'Open in Browser'.

CREATE A QR CODE FOR LINKED IN

CREATE A QR CODE FOR LINKEDIN

Here you can create a QR code for a link to your LinkedIn® profile.

The screenshot displays the Açana QR Code Generator interface. On the left, a sidebar lists various social media and communication options: SMS, Messenger, WiFi, Social media (Facebook, Flickr, Instagram, LinkedIn, Reddit, Snapchat, TikTok, Tumblr, X, Xing, YouTube), Lifestyle, and Location. The LinkedIn option is currently selected. The main area features a large QR code with a watermark. To the right of the QR code is a configuration panel for the LinkedIn profile. It includes a 'User name' input field containing '@pps4Me', an 'Open in Browser' button, and a trash icon. Below the QR code, there are icons for sharing and zooming, and a legend for the QR code's color scheme. The configuration panel also has a 'Border' toggle (checked), a 'Transparent' toggle (unchecked), a 'Format' dropdown set to 'PNG', and an 'Export size' dropdown set to '512x512'.

CREATE A QR CODE FOR REDDIT

CREATE A QR CODE FOR REDDIT

Here you can create a QR code for a link to Reddit®.

The screenshot shows the 'Açana QR Code Generator' interface. On the left, a sidebar lists various categories: SMS, Messenger, WiFi, Social media (with sub-items for Facebook, Flickr, Instagram, LinkedIn, **Reddit**, Snapchat, TikTok, Tumblr, X, Xing, YouTube), Lifestyle, and Location. The 'Reddit' option is selected. The main area displays a QR code with a watermark. To the right, the 'Reddit' section has a 'User name' input field containing 'pps4Me' and an 'Open in Browser' button. Below the QR code, there are controls for 'Border' (checked), 'Transparent' (unchecked), 'Format' (set to PNG), and 'Export size' (set to 512x512). A footer note says 'Transparent foreground or background'.

CREATE A QR CODE FOR SNAPCHAT

CREATE A QR CODE FOR SNAPCHAT

Here you can create a QR code for a link to your Snapchat® profile.

The screenshot shows the 'Açana QR Code Generator' web application. On the left, a sidebar lists various social media and utility categories: SMS, Messenger, WiFi, Social media (with sub-items for Facebook, Flickr, Instagram, LinkedIn, and Reddit), Snapchat (highlighted in orange), TikTok, Tumblr, X, Xing, YouTube, Lifestyle, and Location. The main area displays a large QR code with a watermark 'A pps' in the center. To the right of the QR code, there are settings for the QR code, including 'Border' (checked), 'Transparent' (unchecked), 'Format' (set to PNG), and 'Export size' (set to 512x512). Below the QR code, there is a 'Snapchat' section with a 'User name' input field containing 'werdersnaps' and an 'Open in Browser' button.

CREATE A QR CODE FOR YELP

CREATE A QR CODE FOR YELP

Here you can create a QR code for a tweet on Twitter® or a link to your profile.

The screenshot shows the Açana QR Code Generator interface. On the left, a sidebar lists various categories: Social media, Lifestyle, Dribbble, DoorDash, OnlyFans, OpenTable, Pinterest, SoundCloud, Spotify, Tripadvisor, Trustpilot, Vimeo, VKontakte, **Yelp** (highlighted), Location, Geo, and Apps. The main area displays a QR code with a central logo. Below the QR code are options for 'Border' (checked) and 'Transparent' (unchecked). The 'Format' is set to 'PNG' and the 'Export size' is '512x512'. On the right, the 'Yelp' section contains input fields for 'User name' (FQwTEvRyYsnJMk6rMVxVQ), 'User name hint' (mercedes-benz-arena-stuttgart-stuttgart), 'Business user name' (Enchilada-Stuttgart), and 'Business user name hint' (Enchilada Stuttgart). There are buttons for 'Person' and 'Business' (selected), and an 'Open in Browser' button. A status bar at the bottom indicates 'QRCode was created'.

CREATE A QR CODE FOR A LOCATION

CREATE A QR CODE FOR A LOCATION

You can create a QR code for a location. You can search for a location by address or city and country. Enter the search string and click on „Search“.

The screenshot displays the Açana QR Code Generator interface. On the left, a sidebar lists various QR code categories: Text, URL, Contacts, Event, E-mail, Phone, SMS, Messenger, WiFi, Social media, Lifestyle, Location (highlighted), Geo, Apps, Money, Meeting, and Read QR. The main area shows a QR code with a watermark, a search bar containing "Coit Tower", and a map of the location. The map includes a scale bar (0-75m), a compass, and map controls. The QR code settings are visible below the code, including options for "Border" (checked), "Transparent" (unchecked), "Format" (PNG), and "Export size" (512x512).

CREATE A QR CODE FOR A LOCATION

Select an entry from the find window. After this select a name with latitude and longitude value and click on „OK“. If „Take over name“ is activated, the selected name will be used.

A click on the name in the lower list copies the name to the clipboard. A click on the latitude or longitude copies the respective value. A double click copies the latitude or longitude (e.g. 37.802376,-122.405842) to the clipboard.

Coit Tower

Title	Subtitle
Coit Tower	1 Telegraph Hill Blvd, San Francisco, CA 94...
Tower Bridge	Tower Bridge Rd, London, SE1 2UP, England
Coit Tower Realty	2001 Union St, San Francisco, CA 94123, ...
Coit Tower Ct	Greenville, NC, United States

Name	Latitude	Longitude
Coit Tower	37.802376	-122.405842

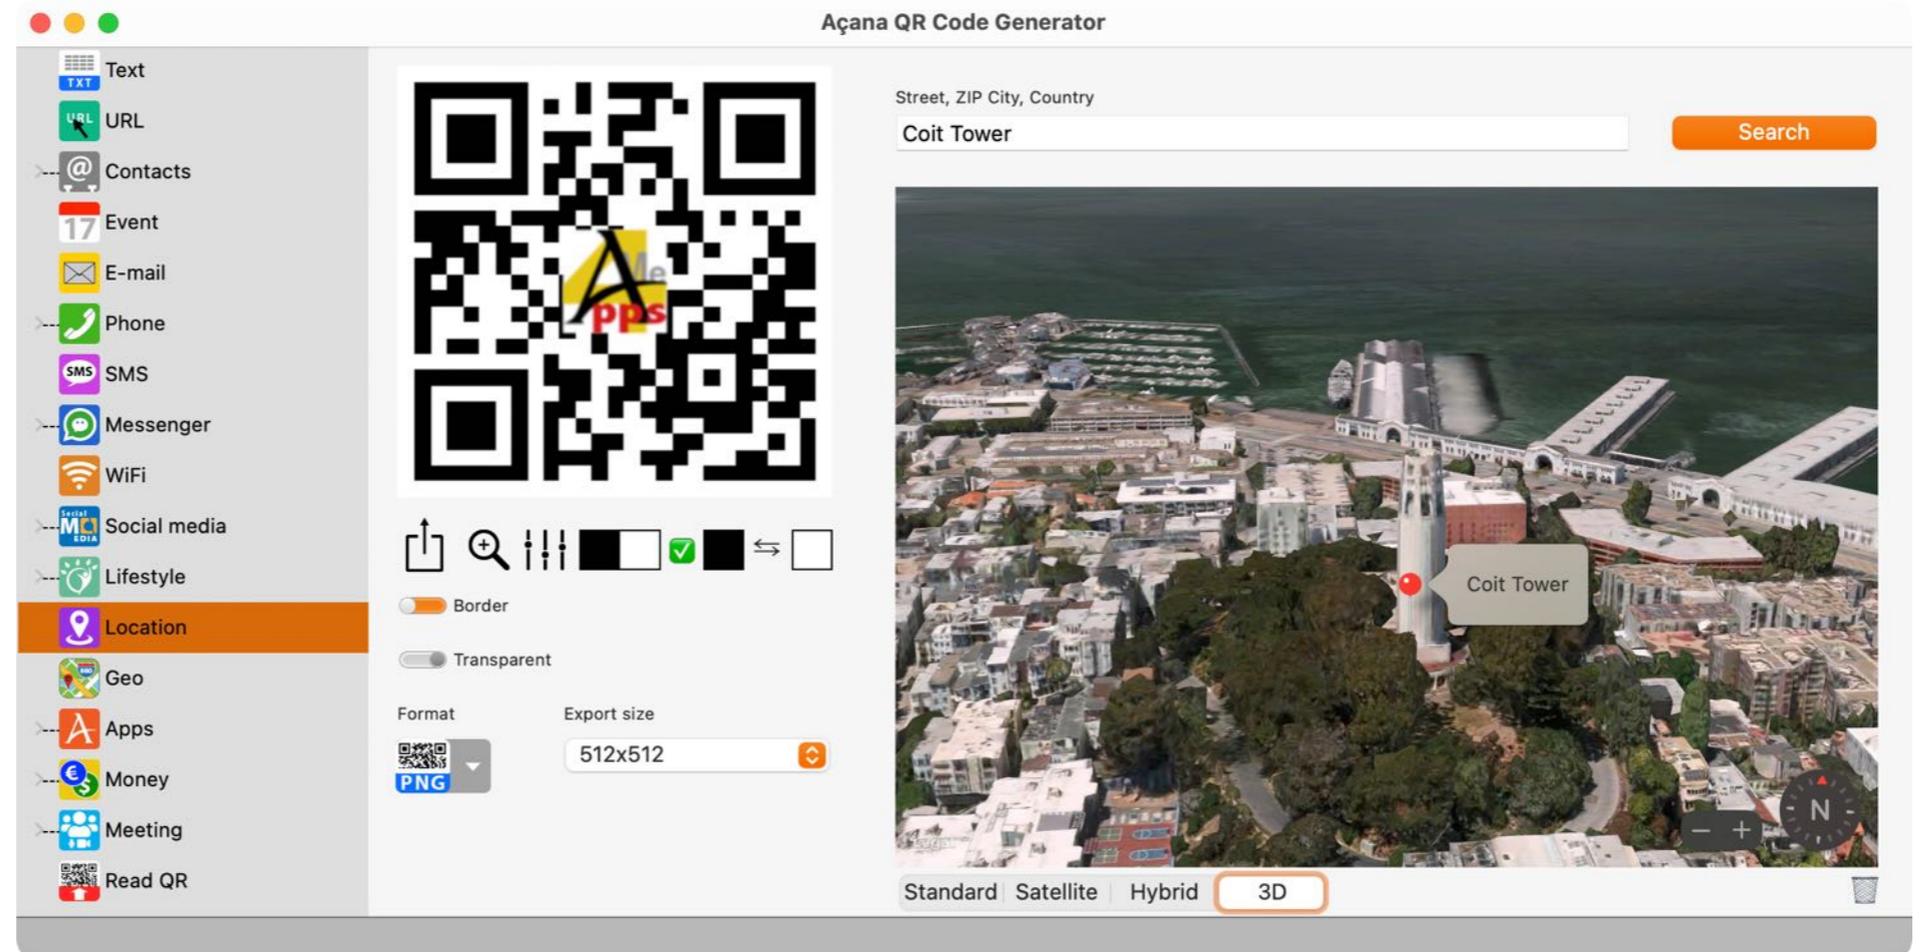

Take over name

Cancel OK

3D MAP MODE

3D MAP MODE

For a better overview, you can use the macOS full screen mode. Also you can switch to the 3D map mode with the key ALT + mouse wheel. You can rotate the map with CTRL + ALT and mouse.

CREATE A QR CODE FOR A LOCATION WITH LATITUDE AND LONGITUDE

CREATE A QR CODE FOR A LOCATION WITH LATITUDE AND LONGITUDE

Here you can create a QR Code for a location via longitude and latitude.

The screenshot shows the Açana QR Code Generator interface. On the left is a sidebar with various QR code categories: Text, URL, Contacts, Event, E-mail, Phone, SMS, Messenger, WiFi, Social media, Lifestyle, Location, Geo (highlighted), Apps, Money, Meeting, and Read QR. The main area features a QR code with a watermark, a map of Patras, Greece, and input fields for Latitude (38.001) and Longitude (22.003). A 'Show coordinates' button is visible. Below the map are map controls like 'Standard', 'Satellite', 'Hybrid', and '3D'. The QR code is set to PNG format and 512x512 export size.

CREATE QR CODE FOR AN APP

CREATE A QR CODE FOR AN APP

CREATE A QR CODE FOR A ZOOM MEETING

You can read a QR code for a Zoom meeting. Click on „Meeting“ and select „Zoom“ from the menu.

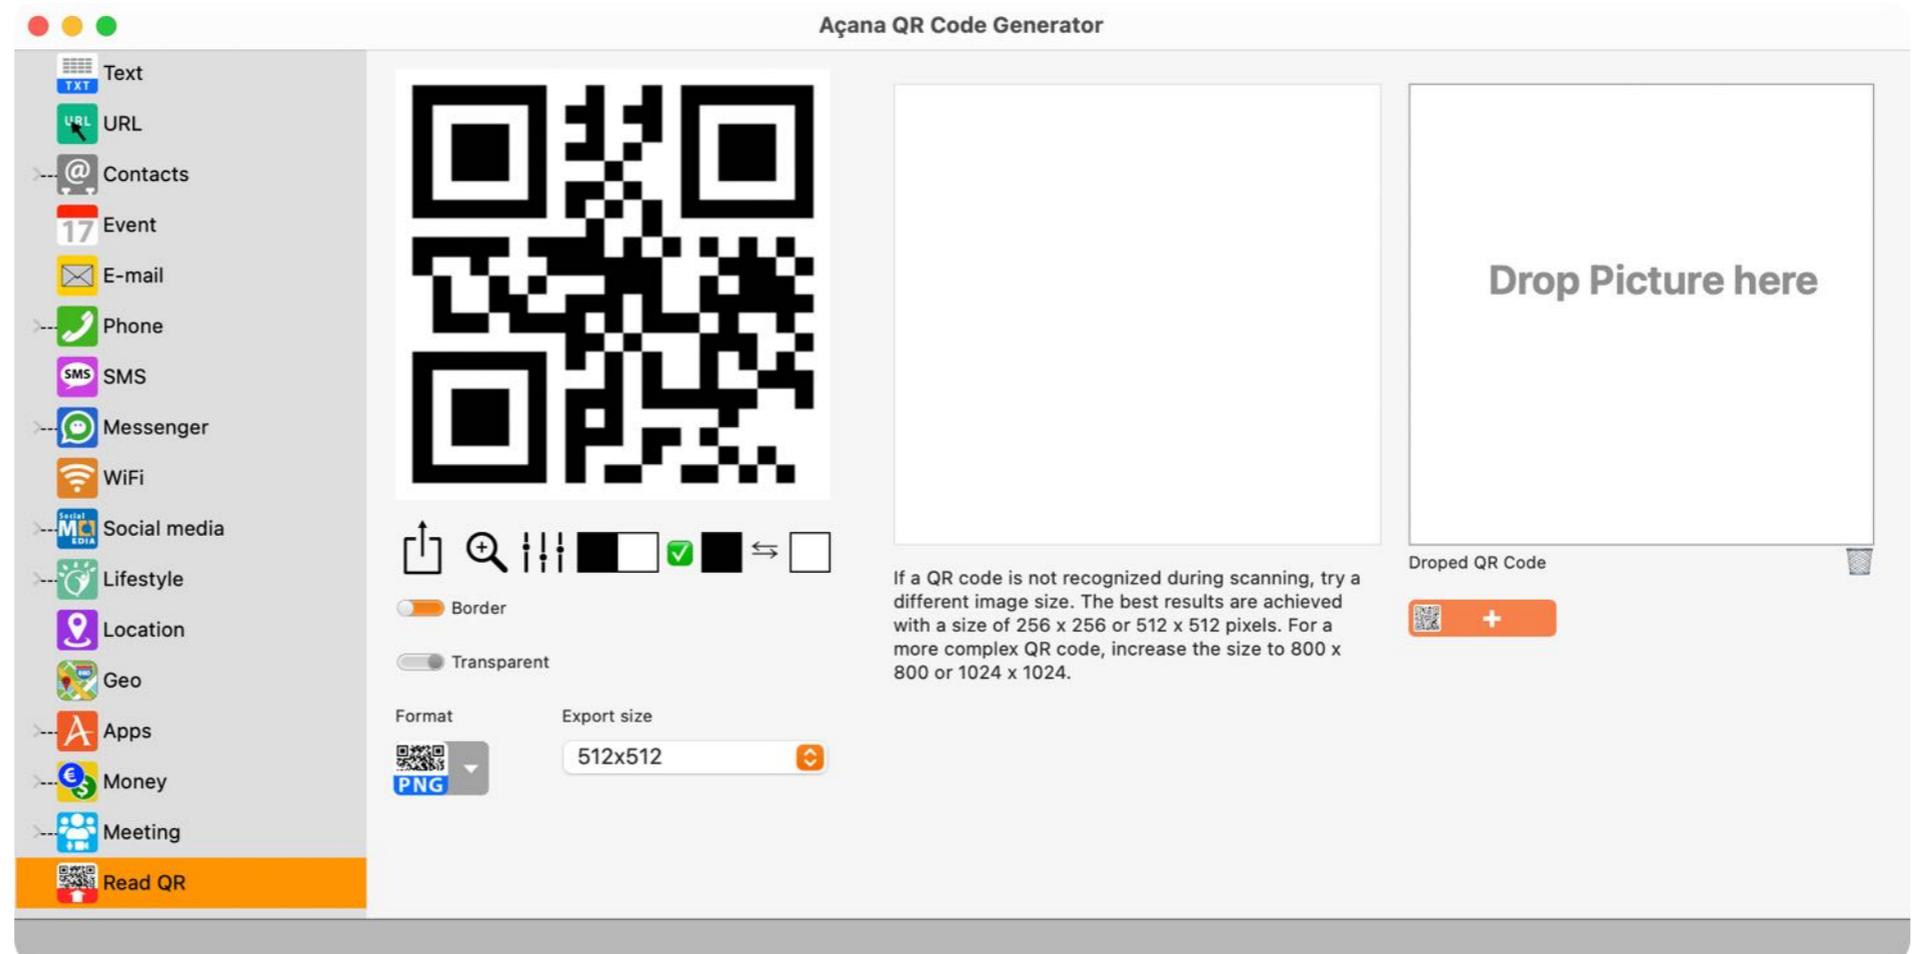

The screenshot shows the Açana QR Code Generator web application. On the left is a sidebar menu with categories like Event, E-mail, Phone, SMS, Messenger, WiFi, Social media, Lifestyle, Location, Geo, Apps, Money, Meeting, FaceTime, Skype, and Zoom. The 'Zoom' option is selected. The main area displays a QR code with a watermark. To the right of the QR code are input fields for 'Meeting ID' (1705) and 'Password' (MyPassword), along with 'Check URL' and 'Copy URL' buttons. Below the QR code are options for 'Border', 'Transparent', 'Format' (PNG), and 'Export size' (512x512). A status bar at the bottom indicates 'QRCode was created'.

READ BAR-CODE OR QR CODE

READ BARCODE OR QR CODE

You can read all QR Codes created with this application. To do so, drag a barcode file in PNG or JPG format into the „Drop Picture here" area or click on the "+ Button".

If the scanned barcode or QR Code is recognised, the corresponding category (URL, vCard, appointment etc.) will be opened and the fields will be filled with the values from the barcode or QR Code. If a code is read in that does not correspond to the existing categories, the data in the category Text will be displayed as "Text". If you import a QR code or a barcode with a size greater than 512 or 1024 pixel, you get this message. You can change this value in the [preferences](#).

READ BAR-CODE OR QR CODE

After a code is read, you can also view the recognised text in raw format.

The imported graphic is greater than 512 pixel. The imported size is now reduced to 512 pixels. If you have problems with the import, change the value in the preferences.

Dropped QR Code

If a QR code is not recognized during scanning, try a different image size. The best results are achieved with a size of 256 x 256 or 512 x 512 pixels. For a more complex QR code, increase the size to 800 x 800 or 1024 x 1024.

READ BAR- CODE OR QR CODE

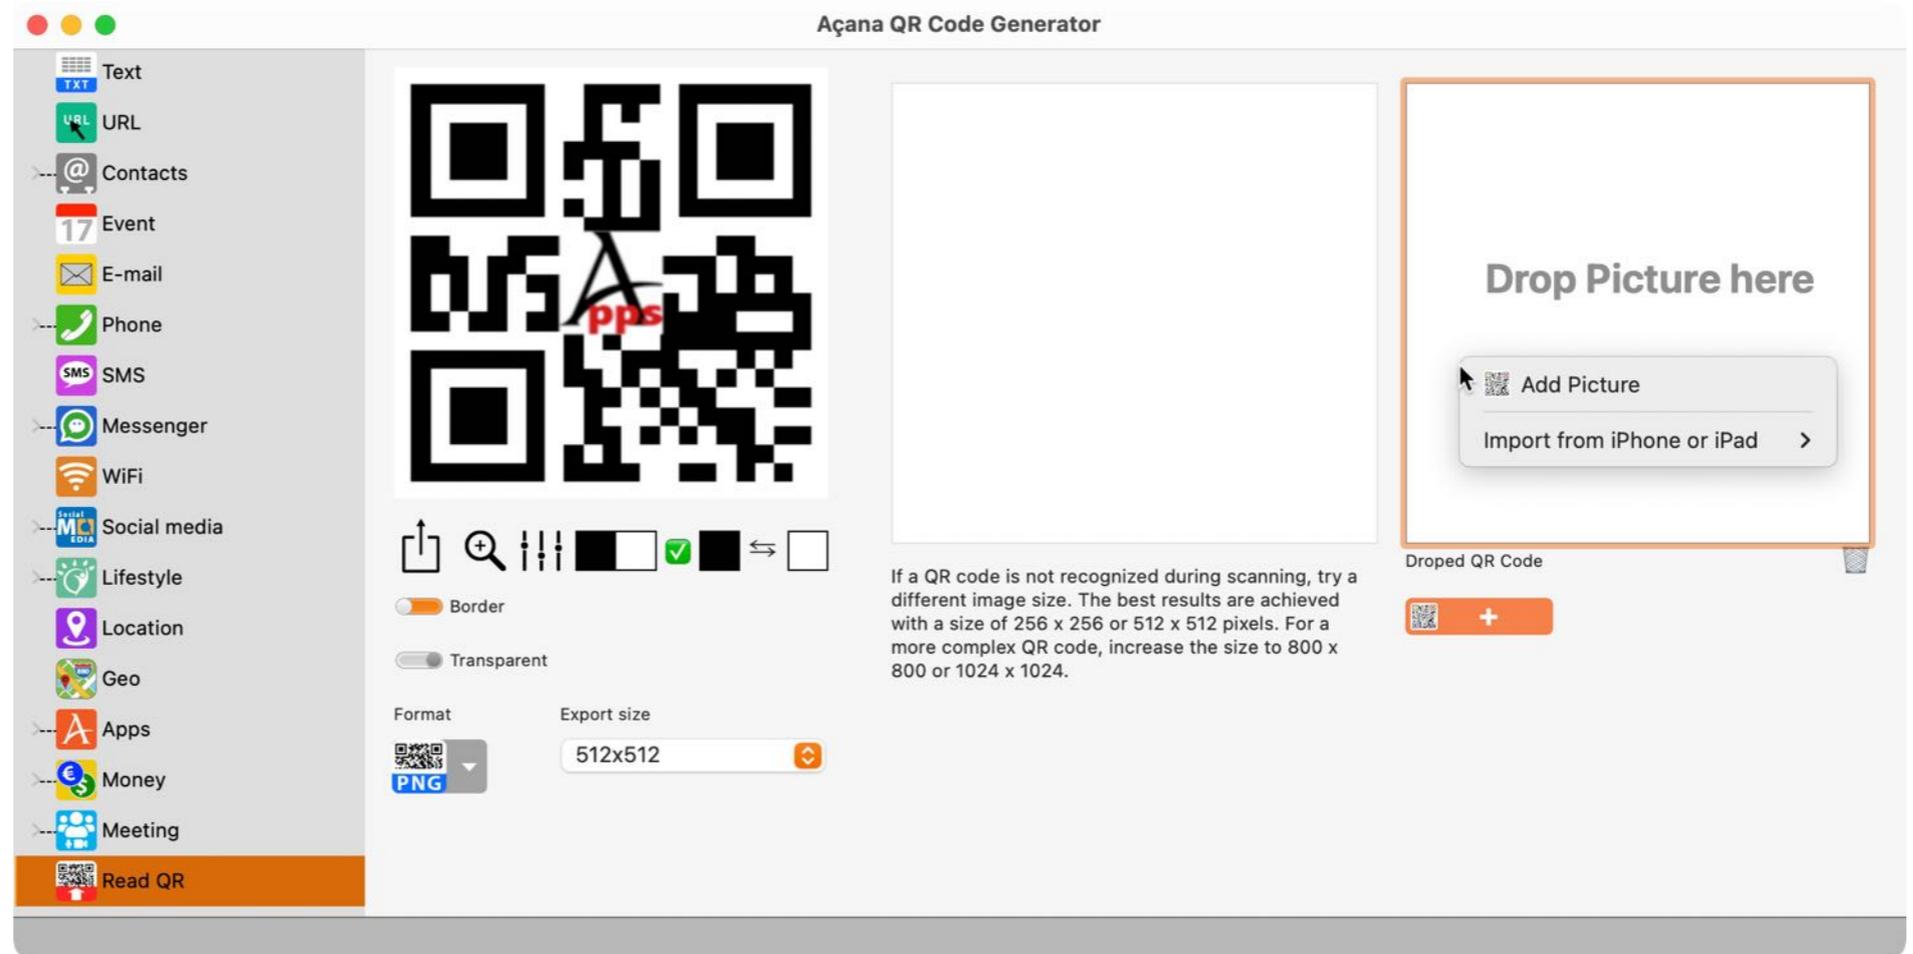

The following barcodes and QR codes can be read:

- Aztec Code ISO 24778
- Code 11
- Code 128 Subset B
- Code 128 automatic subset switching
- Code 3 of 9 Code 39
- Code 32
- Code 93
- EAN-14
- EANX
- Extended Code 3 of 9 Code 39+
- HIBC Aztec Code
- HIBC Code 128
- HIBC Code 39
- HIBC QR Code
- ITF-14
- LOGMARS
- NVE-18
- PZN

IMPORT QR CODE FROM IOS DEVICE

IMPORT QR CODE FROM IOS DEVICE

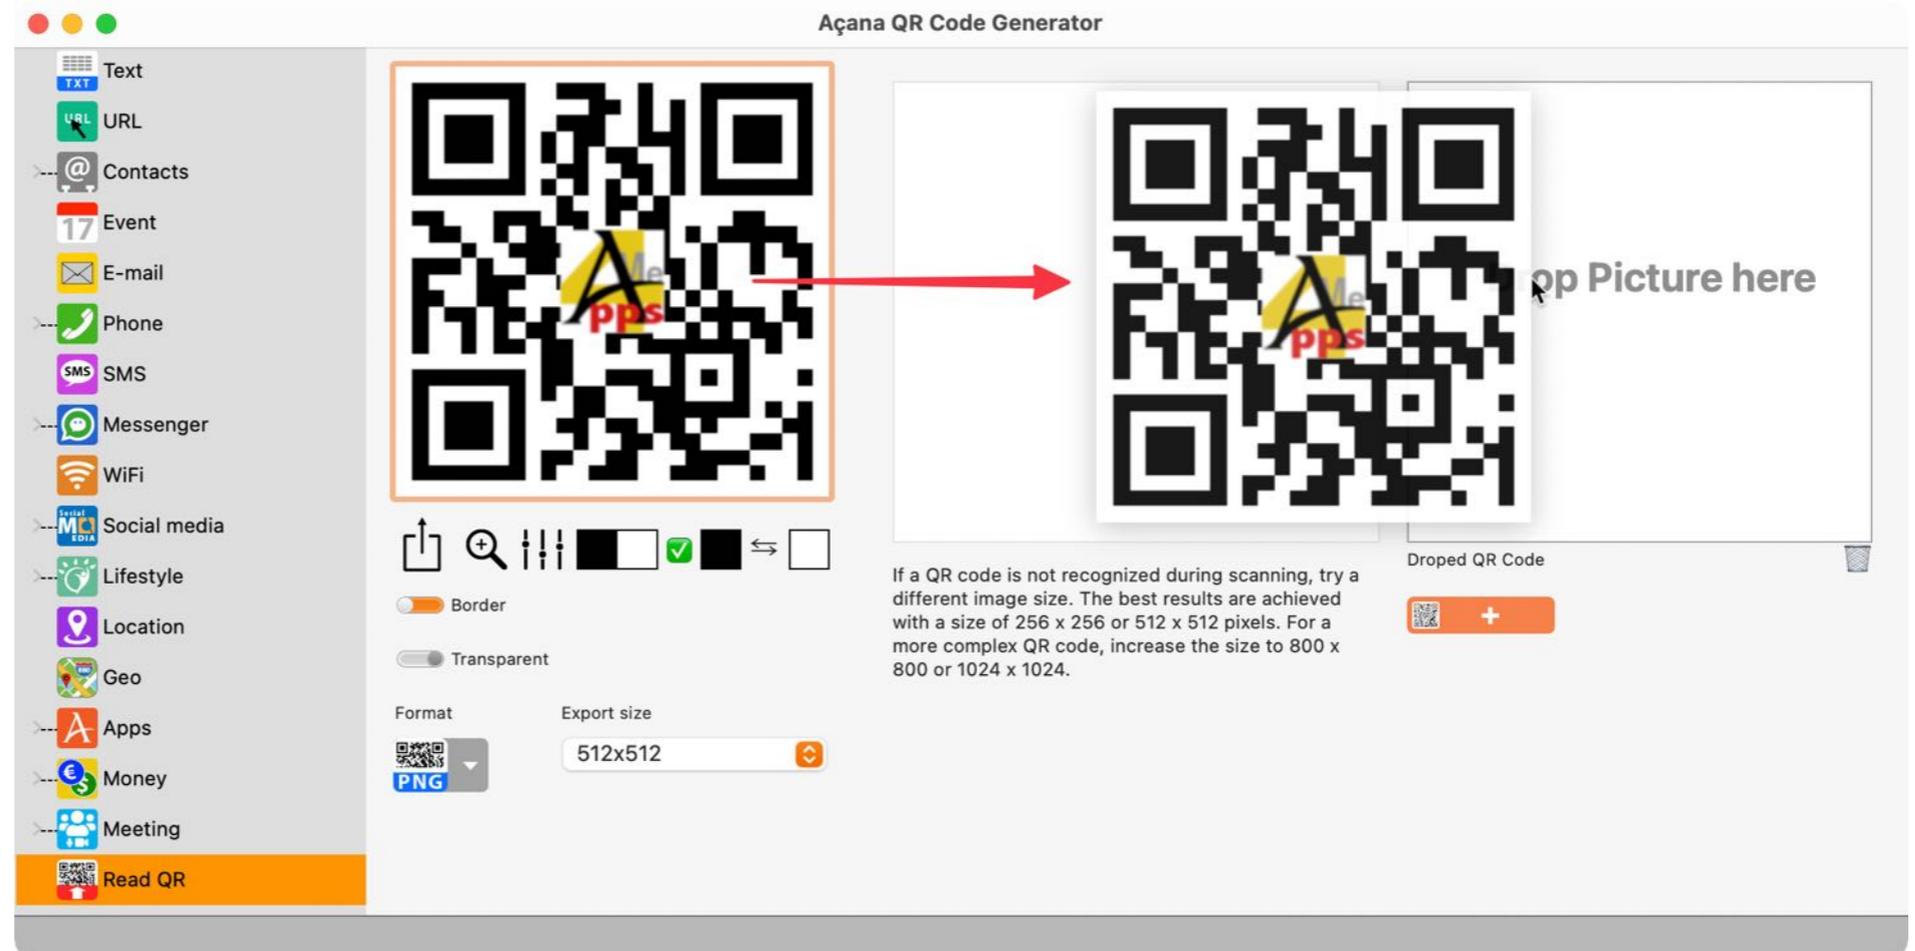

You can read a QR code from any iOS device. Open the context menu in the area „Drop Picture here“ and select „Import from iPhone or iPad“.

VERIFY A QR CODE

VERIFY A QR CODE

Each created QR code can be checked using the „Read QR Code“ function. To do this, create any QR code in a category. Now click on "Read QR" in the toolbar menu and drag the last created QR code from the left side to the field "Drag image here". The QR code will now be checked and displayed again in the corresponding category. After a code is read you can also view the recognised text in raw format.

SHARE A QR CODE

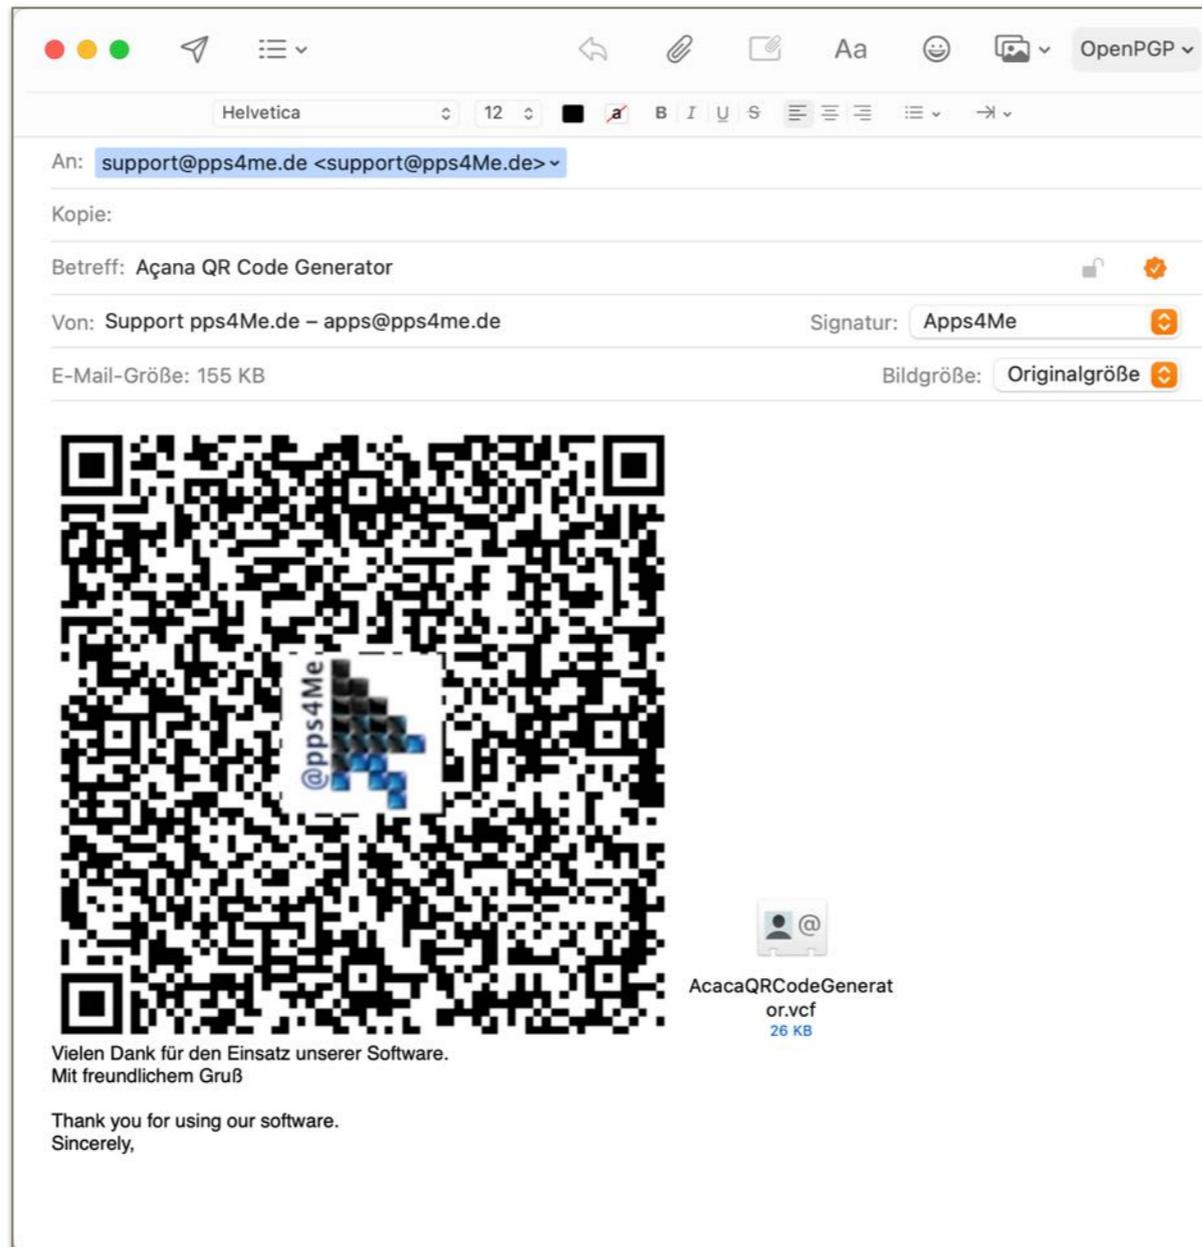

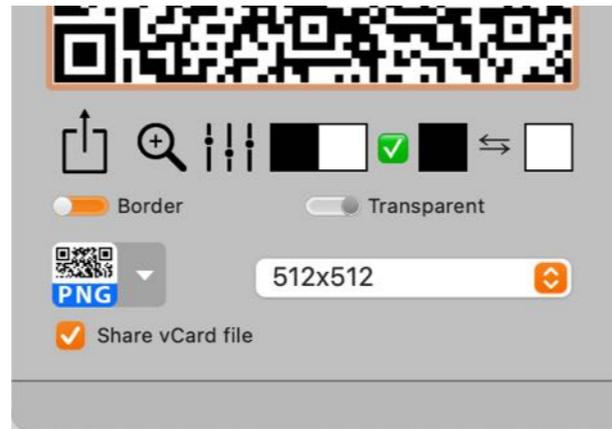

SHARE A QR CODE

You can share any QR code with the sharing services that are available in your system. Click on the sharing icon and select a sharing service from the menu.

SHARE A QR CODE

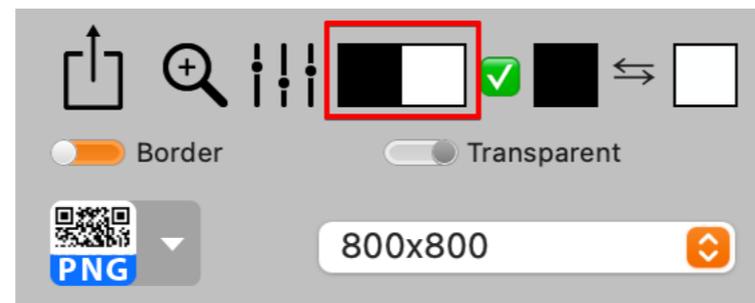

With the switch „Share vCard file“ you can share the QR code and a vCard file together.

MAGNIFY A QR CODE

MAGNIFY A QR CODE

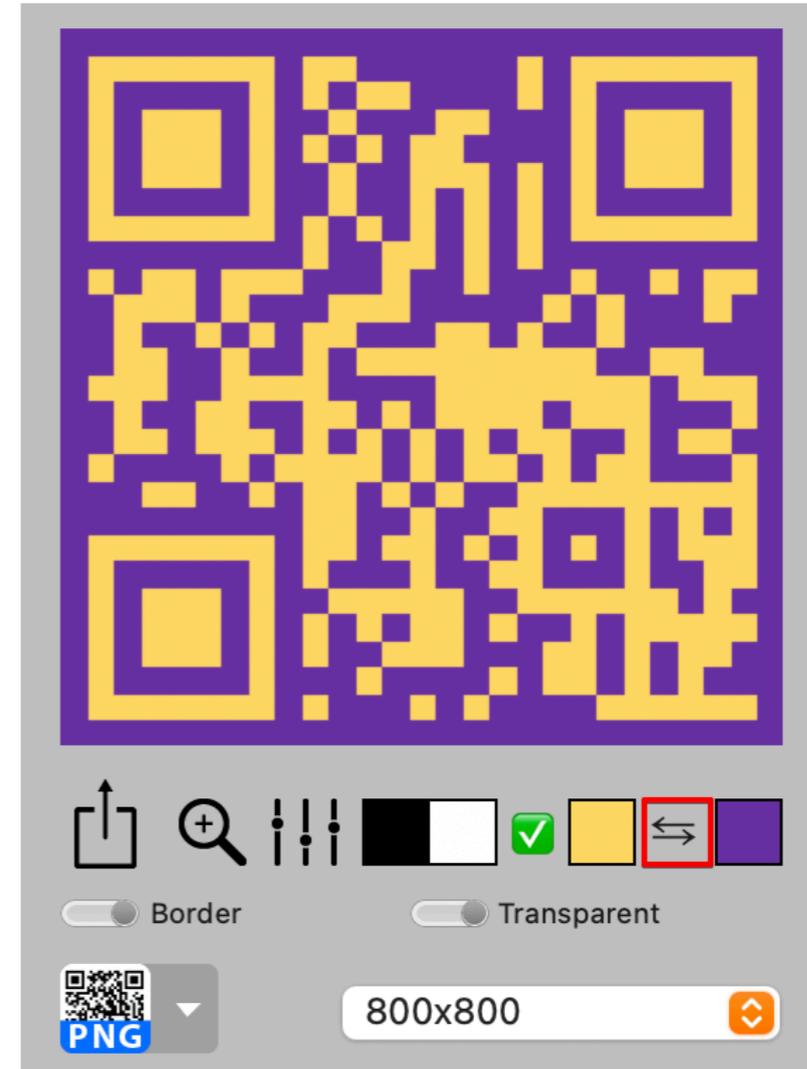

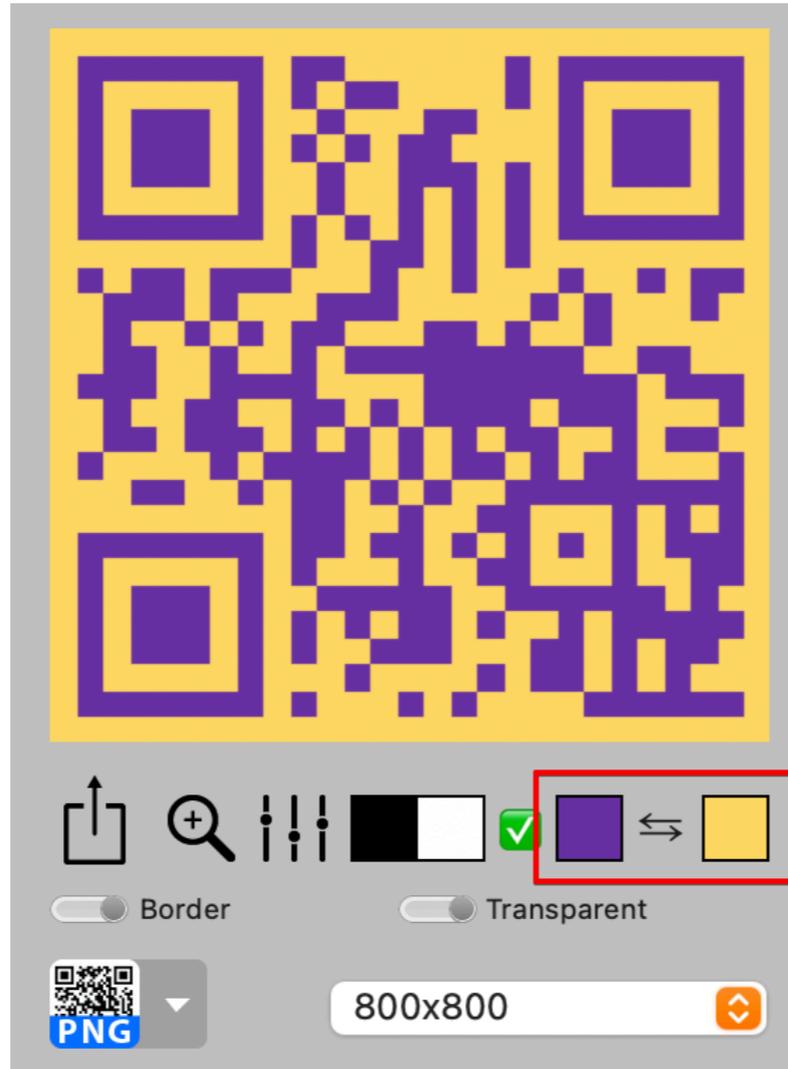

You can magnify a QR code with a click on the magnify icon.

CHANGE QR CODE COLOR

CHANGE QR CODE COLOR

You can change the colours for a QR. Click on the color icons the change the color.

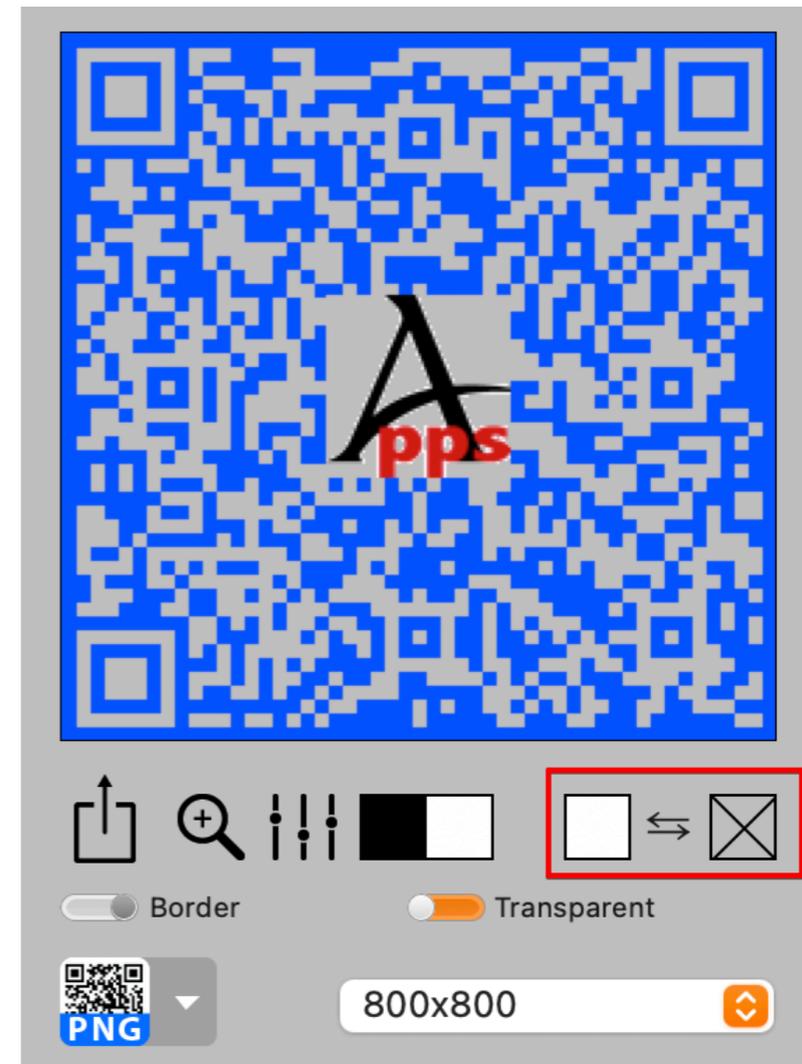

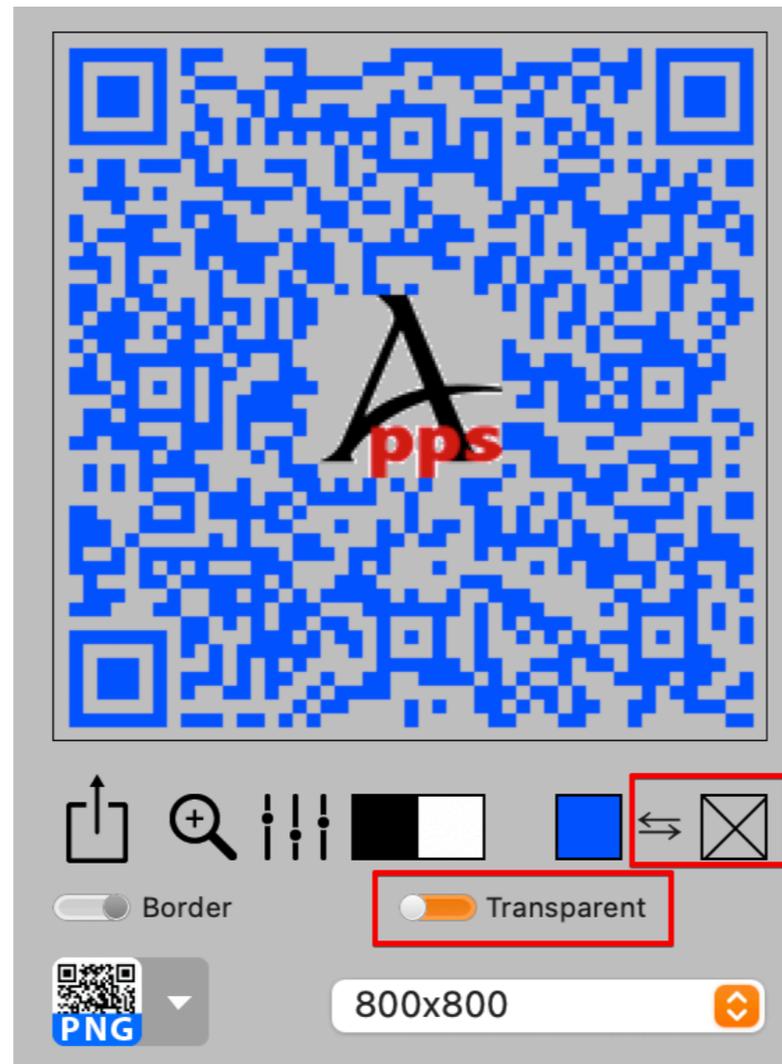

You can also switch the colours. Click on the switch icon. With a click on the black and white symbol the colors can be reset.

CREATE QR CODE WITH TRANSPA- RENCY

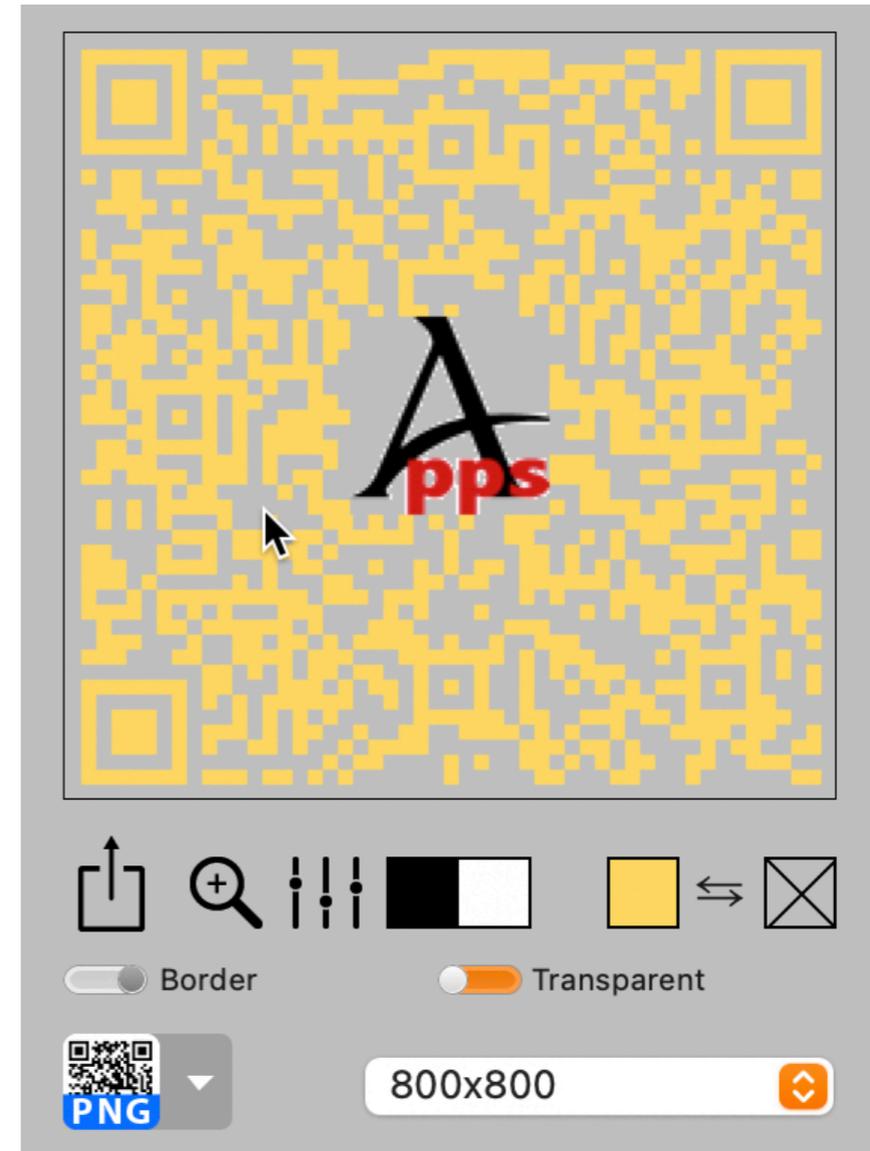

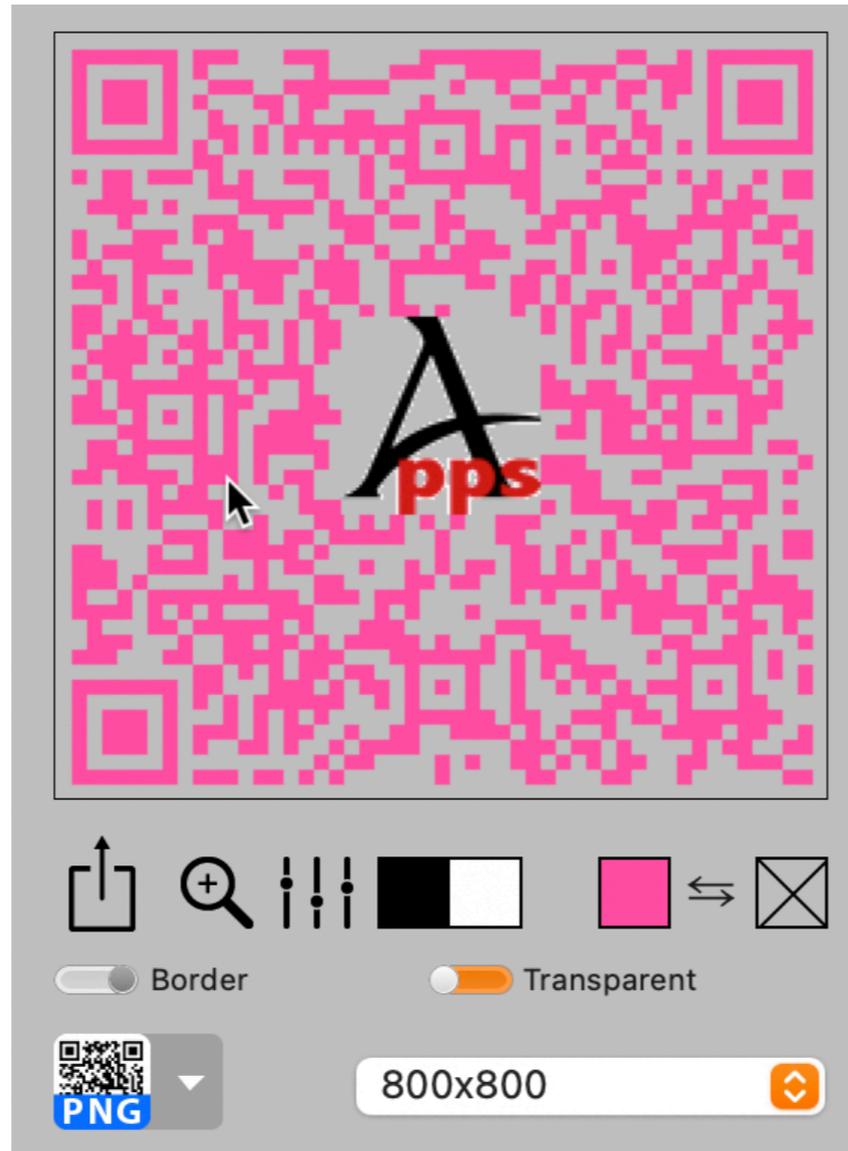

CREATE QR CODE WITH TRANSPARENCY

Activate the "Transparency" switch to create a QR code with a transparent foreground or background. With this function the background is changed to "white" and displayed transparently. With the switch "Swap foreground and background color" the foreground becomes transparent and the foreground color becomes the background color. Therefore the color field for the foreground, after the color swap, is displayed with white color. By pressing the button "Swap foreground and background color" again, the color fields will get their original colors again.

CREATE QR CODE WITH TRANSPA- RENCY

If transparency is enabled, the color for the foreground can be changed as desired.

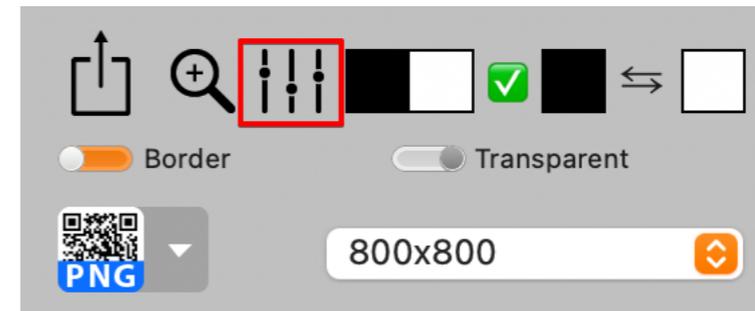

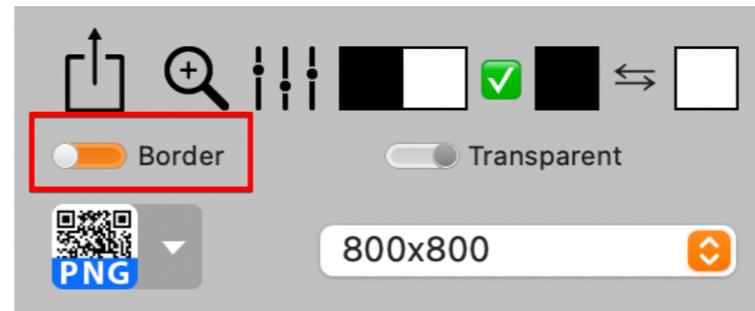

QR Codes with a transparent foreground or background can be exported with transparency only to the formats that also support transparency. These are only the PNG and TIFF formats. If a transparent QR code is exported to another format, the transparency is replaced by the color "white"

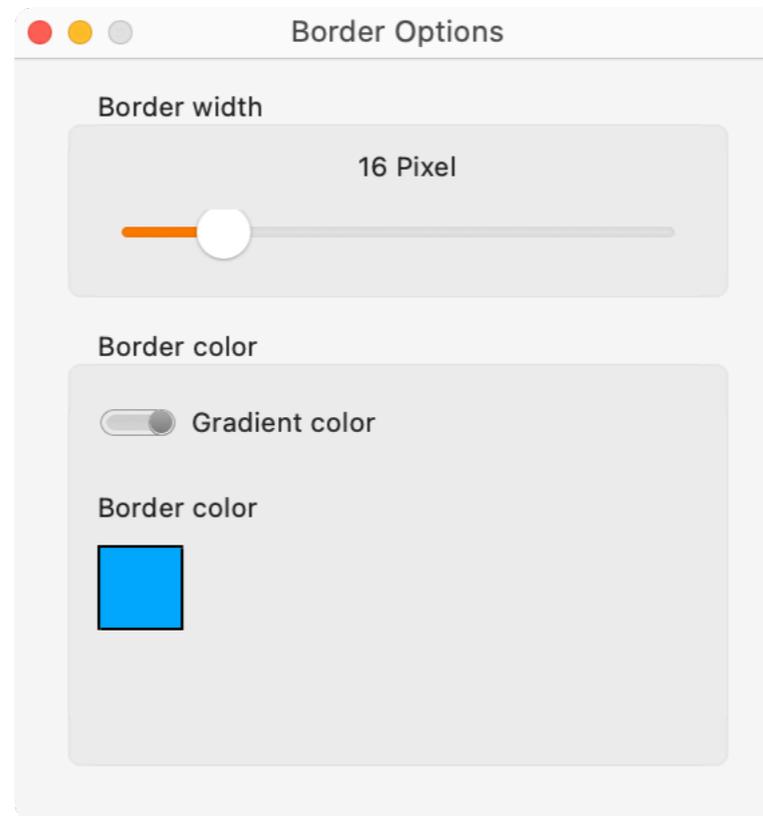

CREATE QR CODE WITH A BORDER

CREATE QR CODE WITH A BORDER

Activate the "Border" button to create a QR code with a border. Click on the "Border Options" icon. The maximum border width is 100 pixels.

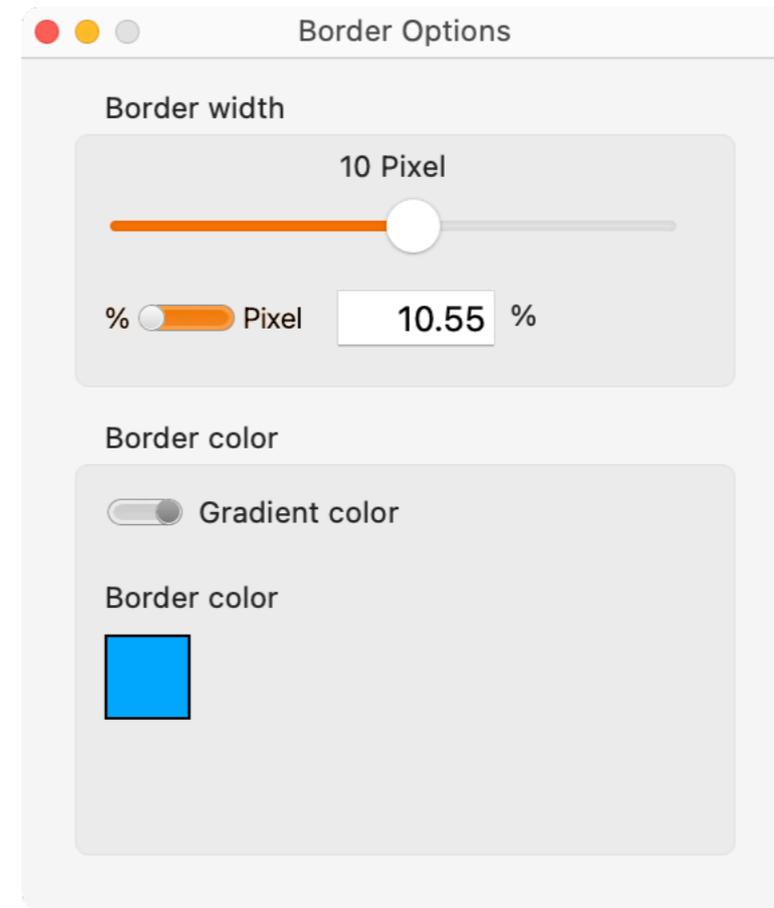

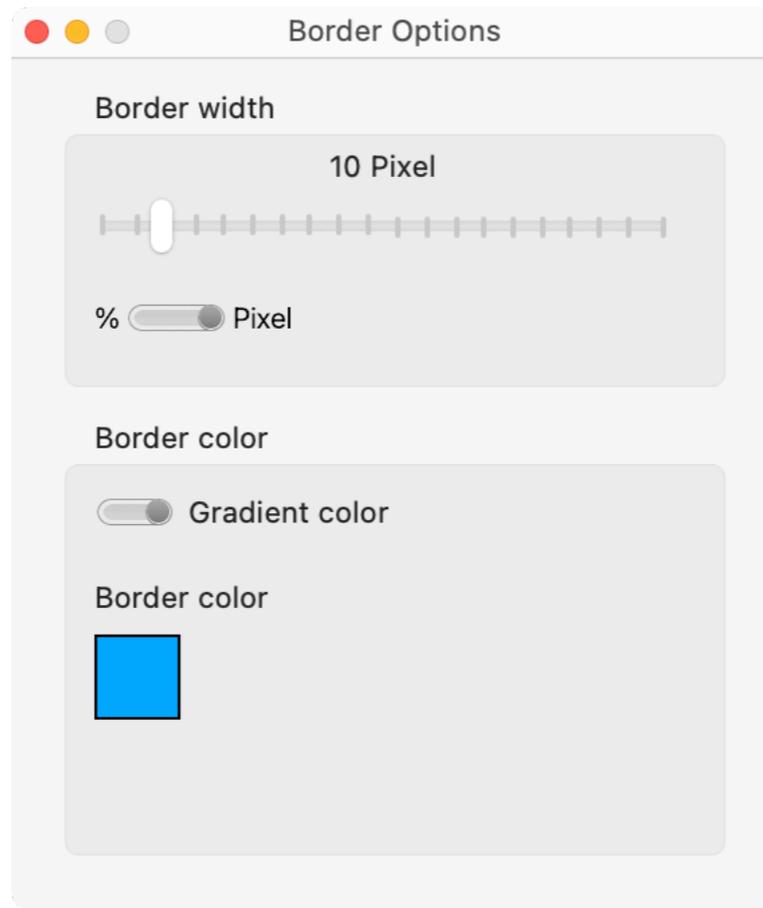

Here you can set the width and color of the frame. The width of the frame (in pixels) is always absolute and independent of the size in pixels of the export file.

CREATE QR CODE WITH A BORDER

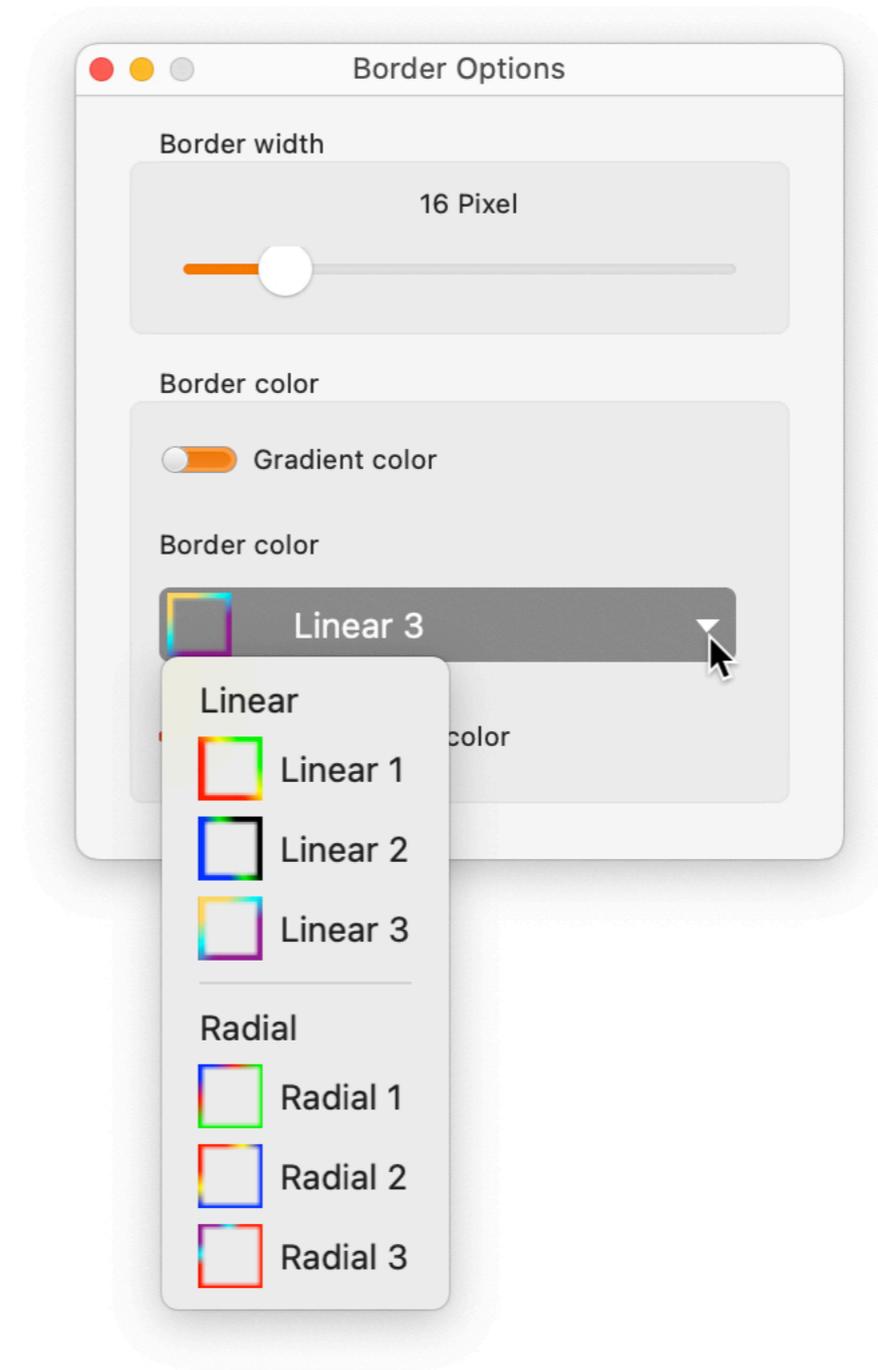

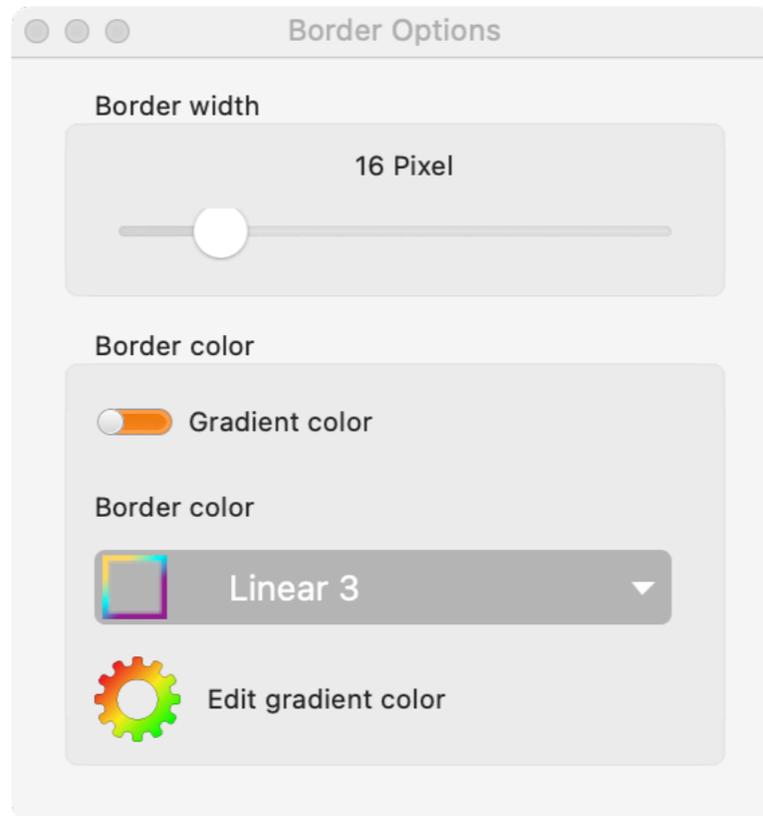

The width of the frame can be specified as an absolute value in pixels or as a percentage in relation to the output size.

CREATE QR CODE WITH A GRADIENT BORDER COLOR

CREATE QR CODE WITH A GRADIENT BORDER COLOR

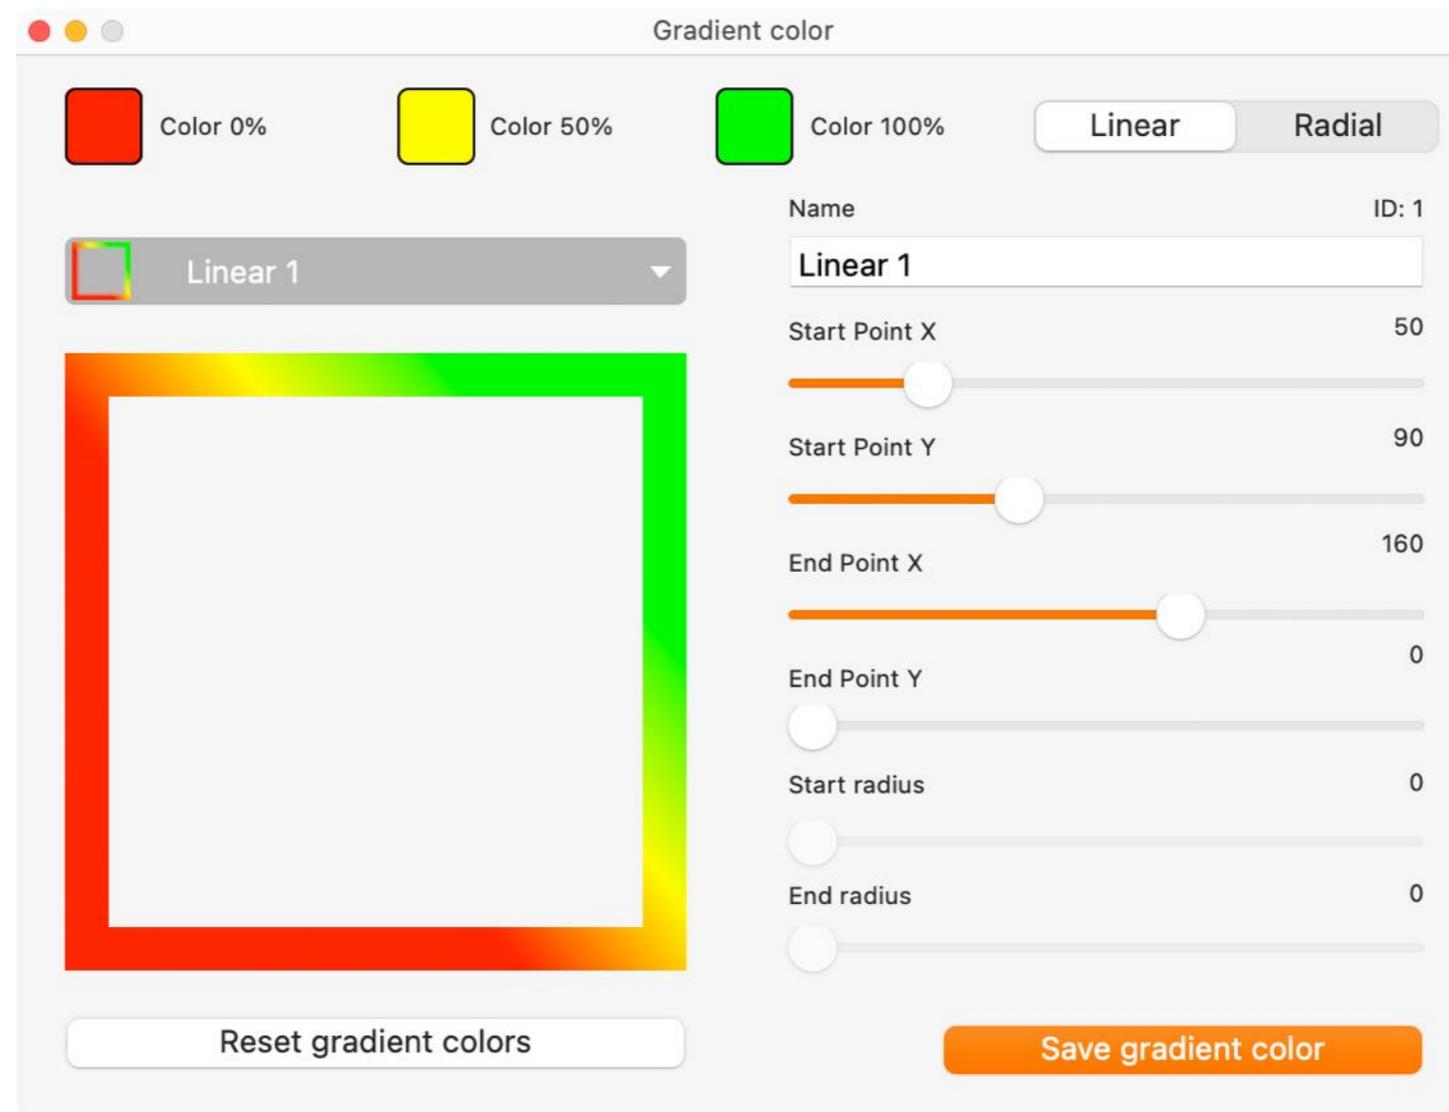

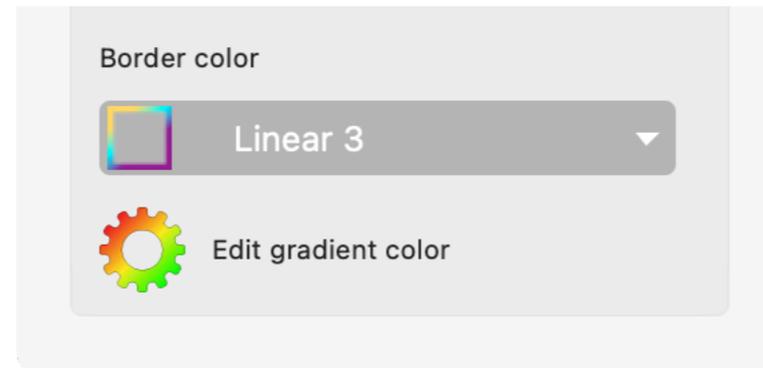

Activate the „Gradient color" button in the „Border Options" to create a QR code with a gradient border. Here you can select three different gradients for linear and radial gradients.

CREATE YOUR OWN GRADIENT COLOR

CREATE YOUR OWN GRADIENT COLOR

Click on the "Edit gradient" icon in the "Frame options" to create your own gradient. You can define a maximum of 3 gradients each for linear and radial.

CREATE YOUR OWN GRADIENT COLOR

Select a gradient from the list and change the values on the right side and possibly also the colors. In the "Name" field you can specify the name for this gradient. Click on "Save gradient color" to save the new values. These new values for the selected gradient are also available after a restart of the application. Reset gradients" resets all gradients to the default settings.

The screenshot shows a web application titled "Gradient color". At the top, there are three color swatches labeled "Color 0%" (yellow), "Color 50%" (cyan), and "Color 100%" (purple). Below these is a dropdown menu showing "Linear 3". To the right, there are two tabs: "Linear" (selected) and "Radial". The "Name" field contains "Linear 3" and "ID: 3". Below the name are six sliders for "Start Point X", "Start Point Y", "End Point X", "End Point Y", "Start radius", and "End radius". The "Start radius" and "End radius" sliders are currently set to 0. At the bottom, there are two buttons: "Reset gradient colors" and "Save gradient color".

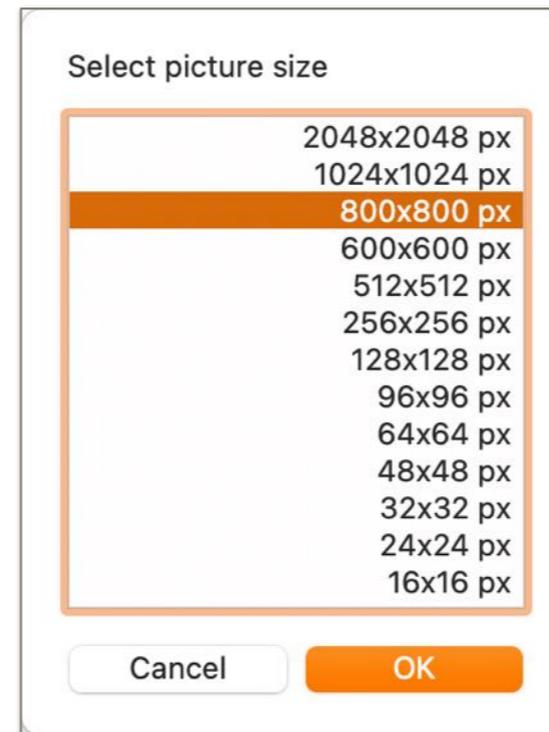

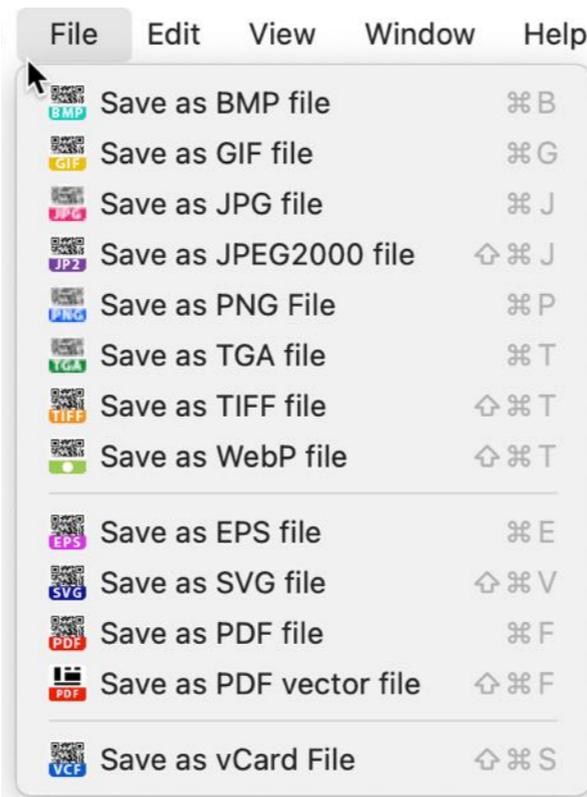

EXPORT A QR CODE

EXPORT A QR CODE

You can export a QR Codes in the following formats:

- BMP
- GIF
- JPG
- JPEG2000
- PNG (with transparency)
- TGA (with transparency)
- TIFF (with transparency)
- WebP (with transparency)
- EPS (QR Code in vector format)
- SVG (QR Code in vector format)
- PDF (QR Code as image or in vector format)
- vCard file (only available for vCard)

Select „File“ from the menu and choose a format. For PNG files you can also choose the size of the QR code.

EXPORT A QR CODE

The following restrictions apply in PDF vector format:

- Own logo can not be used
- The QR code is always created from the foreground color only
- The background is always transparent

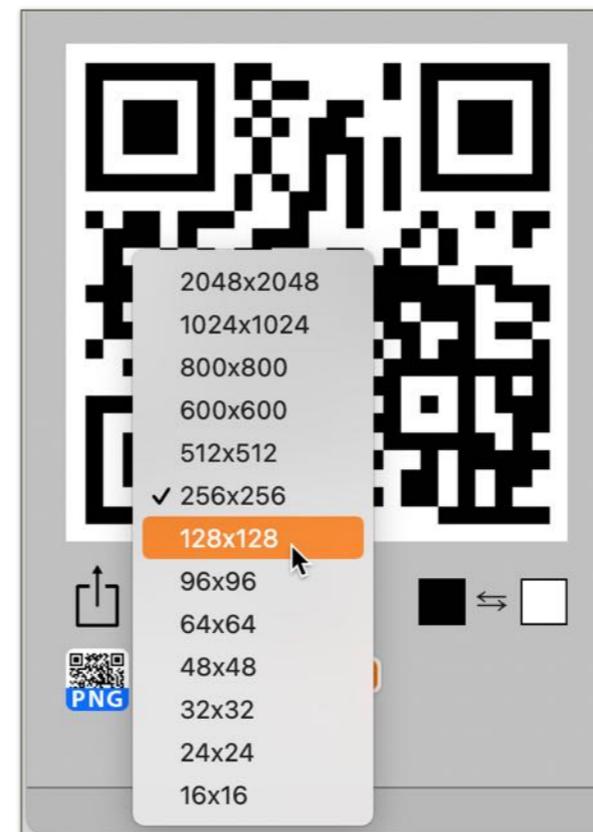

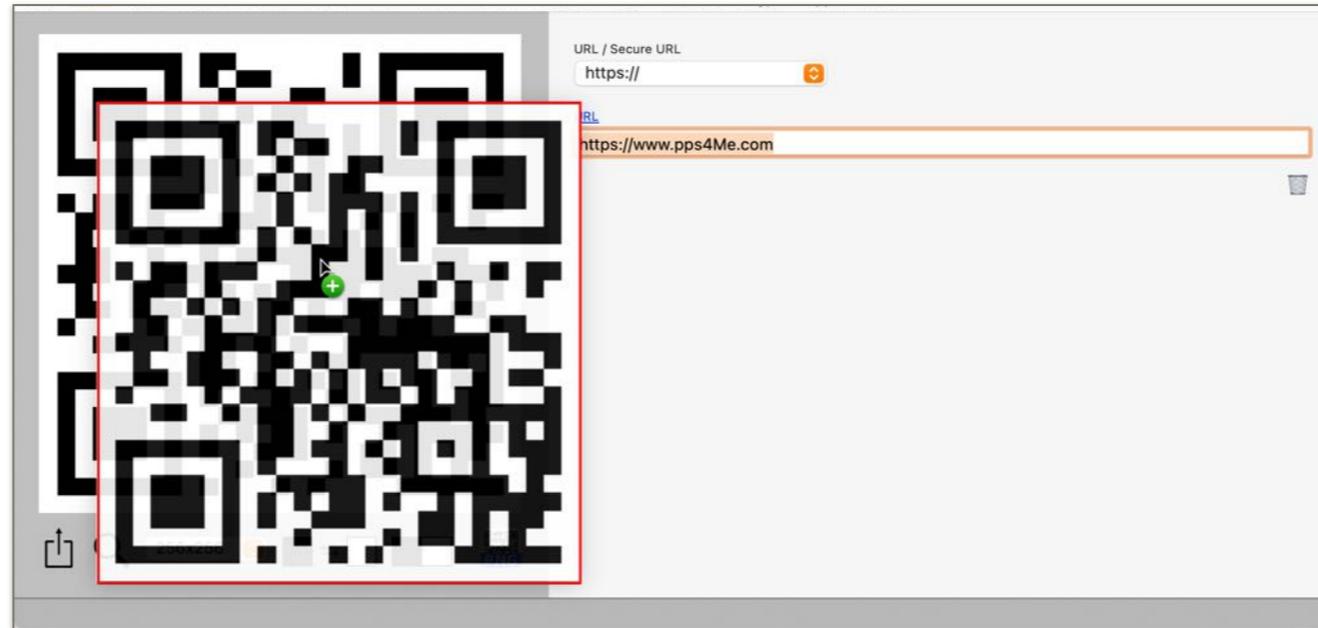

Example:

DRAG AND DROP QR CODE

DRAG AND DROP QR CODE

A created QR Code can be copied (as a PNG or SVG file) to the Desktop or any folder in the Finder via drag and drop. The QR Code can also be copied (in TIFF format) to any application by drag and drop. Just drag and drop the QR Code into a window of the Finder or any other application.

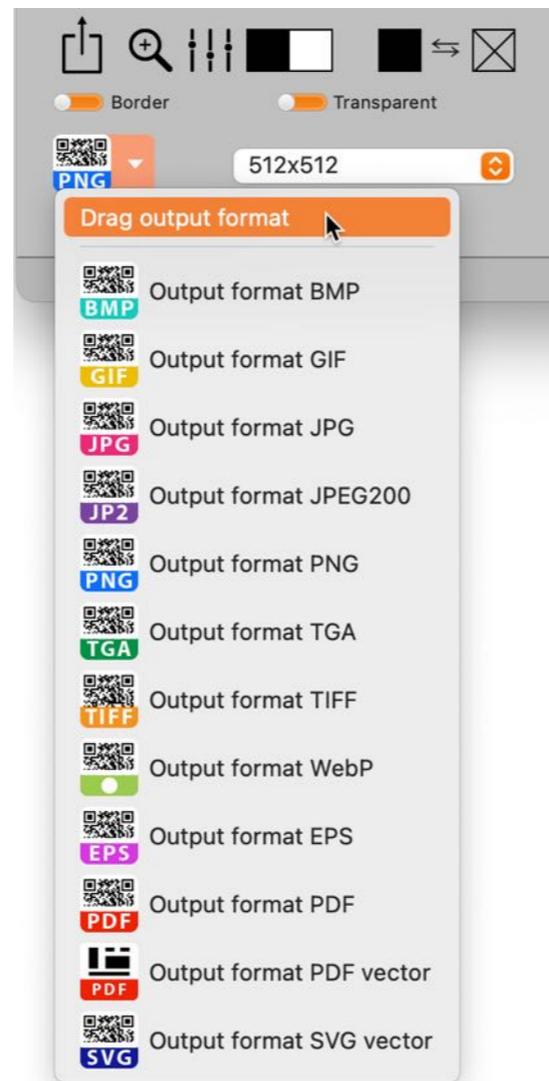

DRAG AND DROP QR CODE

The size of the QR Code can be set via the selection menu. The output format for the "Drag and Drop" function can be set to the following formats via this menu:

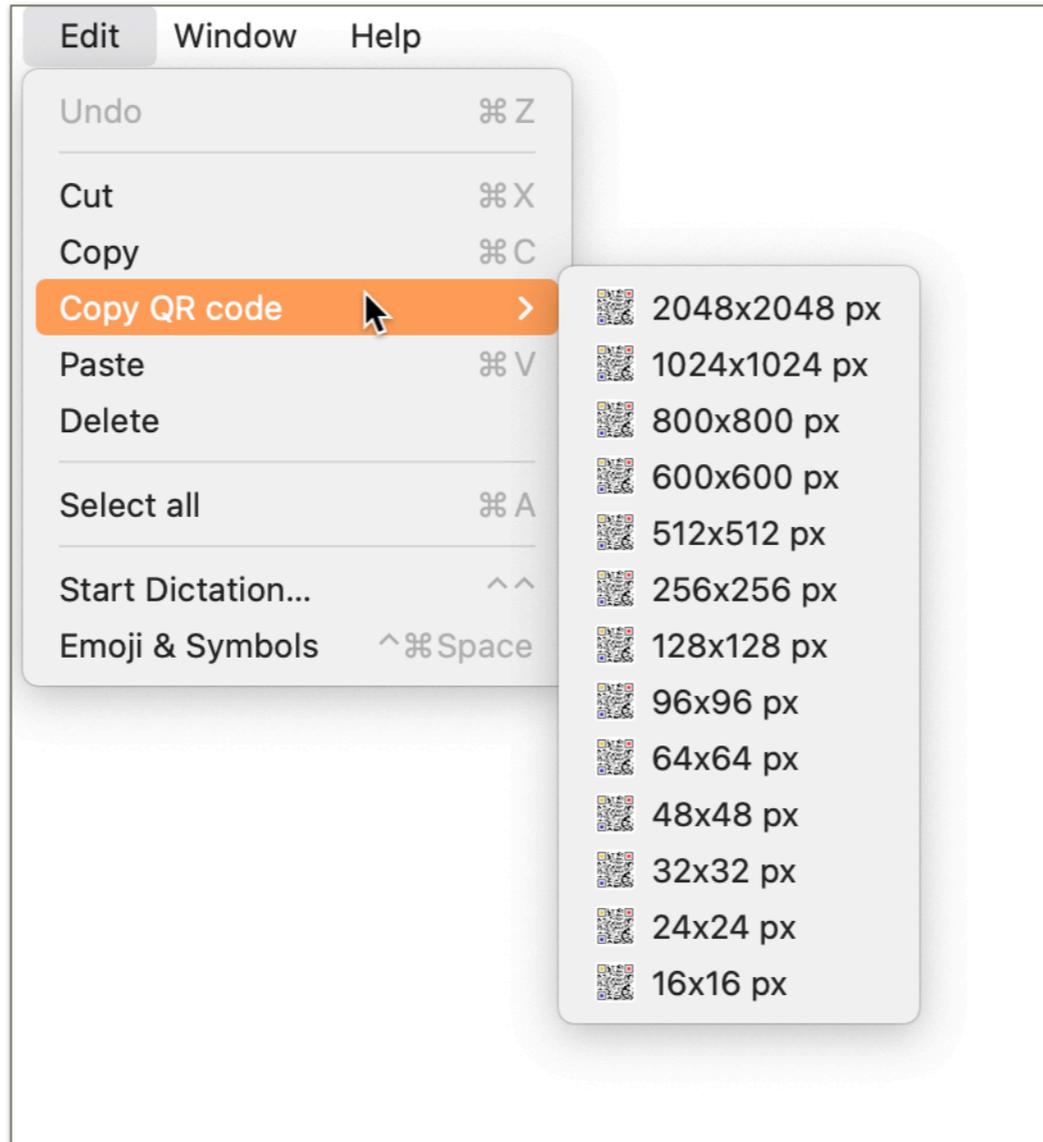

- BMP
- GIF
- JPG
- JPEG2000
- PNG (with transparency)
- TGA (with transparency)
- TIFF (with transparency)
- WebP (with transparency)
- EPS (QR Code in vector format)
- PDF (QR Code as image or in vector format)
- SVG (QR Code in vector format)

COPY QR CODE TO CLIPBOARD

COPY QR CODE TO CLIPBOARD

Select „Menu => Edit => Copy QR code“ and size to copy a QR code into the clipboard.

PREFERENCES

In the preferences you can set the values for reading QR codes and error correction.

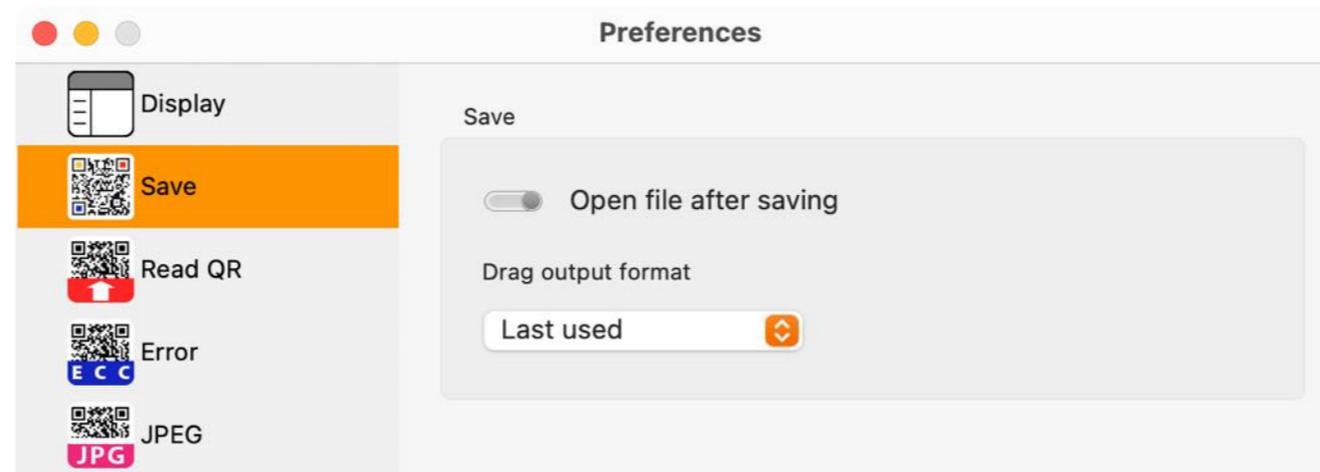

Display

The display for the main window and the preferences can be changed here.

Save

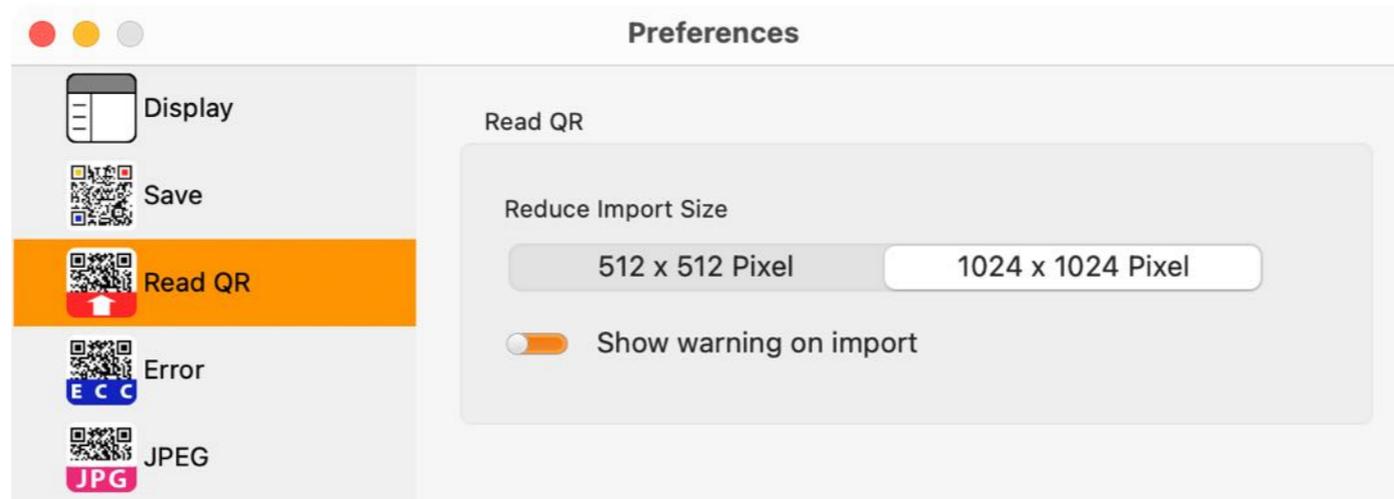

Here you can set whether exported files should be opened after saving. When dragging and dropping a QR code, the SVG format can be selected. The PNG format is used as the default.

PREFERENCES

Read QR or Barcode

For a better result it is sometimes necessary to reduce the size of the imported graphic. Here you can choose between two sizes. The original file will not be changed.

Error correction

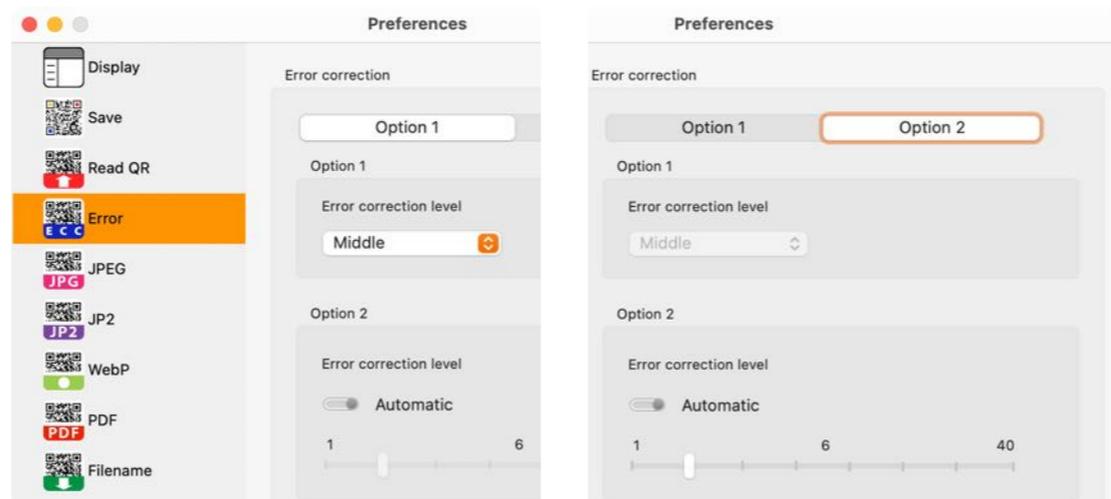

For a better result it is sometimes necessary to adjust the error correction. You have two main options to do this.

Option 1:

- Low
- Middle
- Better
- High

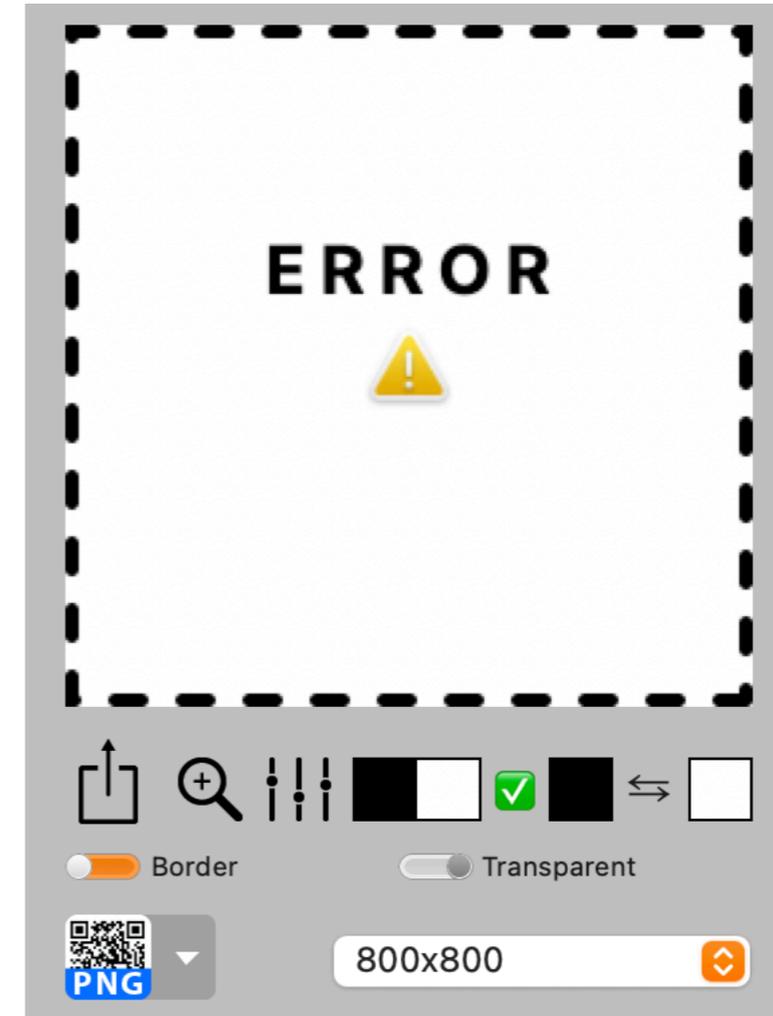

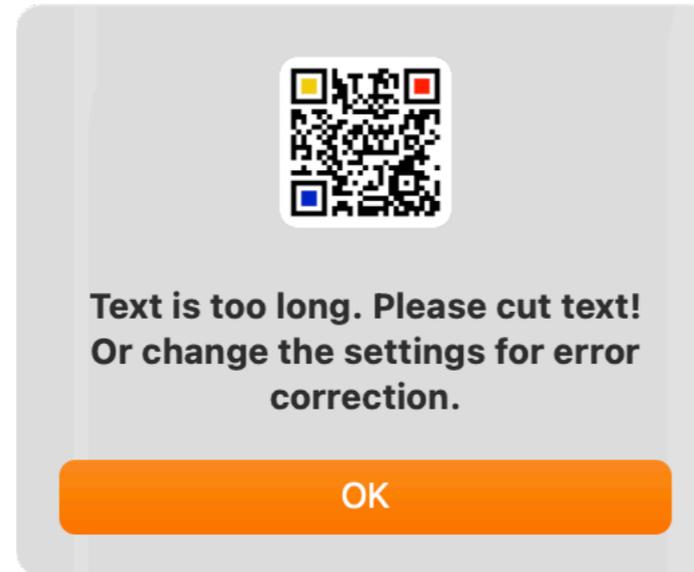

Option 2:

- Automatic
- A value between 1 and 40

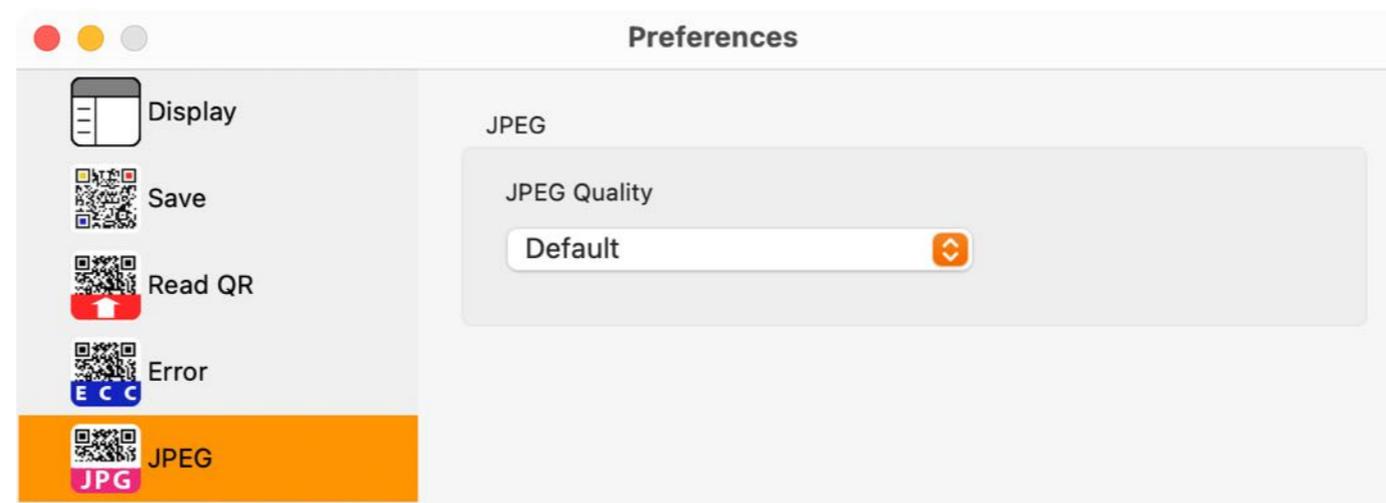

PREFERENCES

If a QR code cannot be generated, an error message is displayed.

JPEG

Here you can set the quality for export.

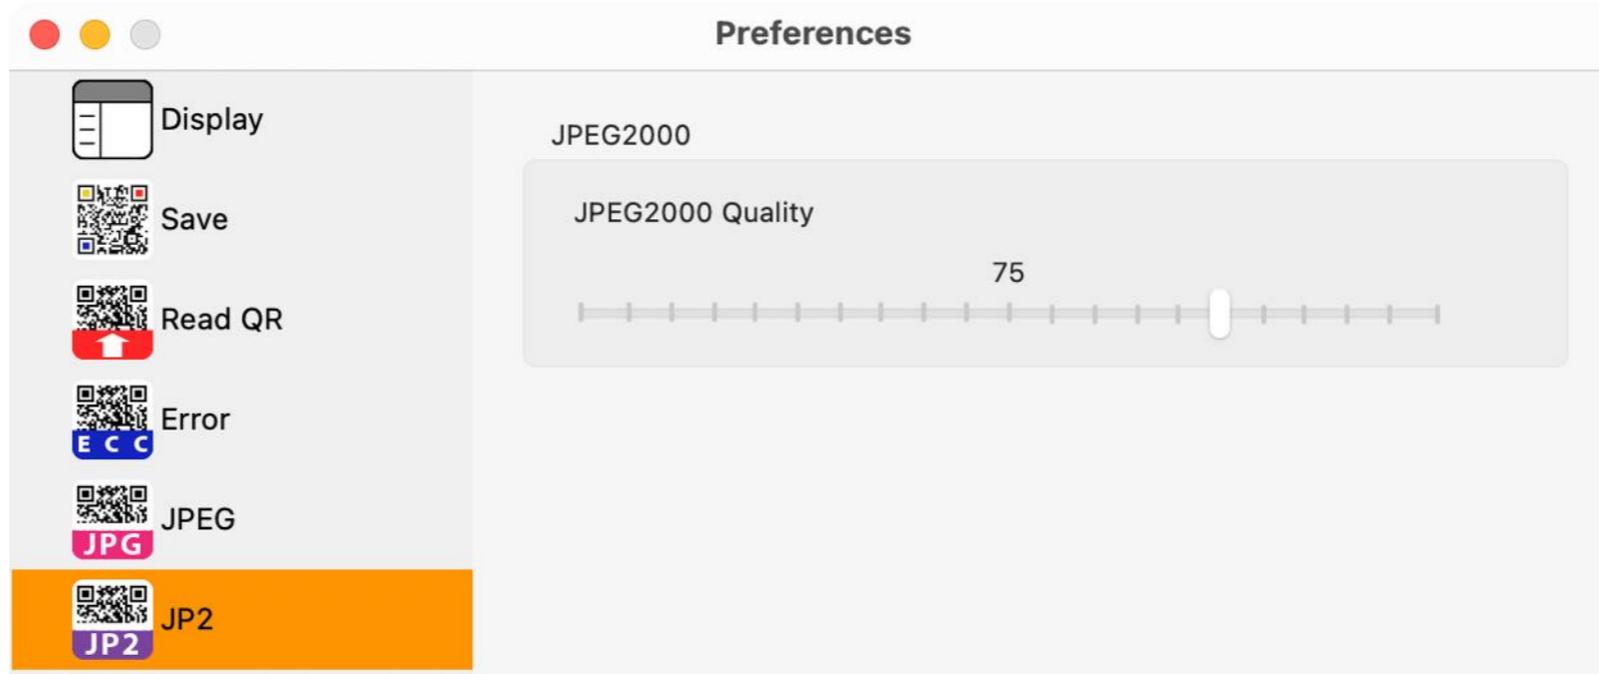

PREFERENCES

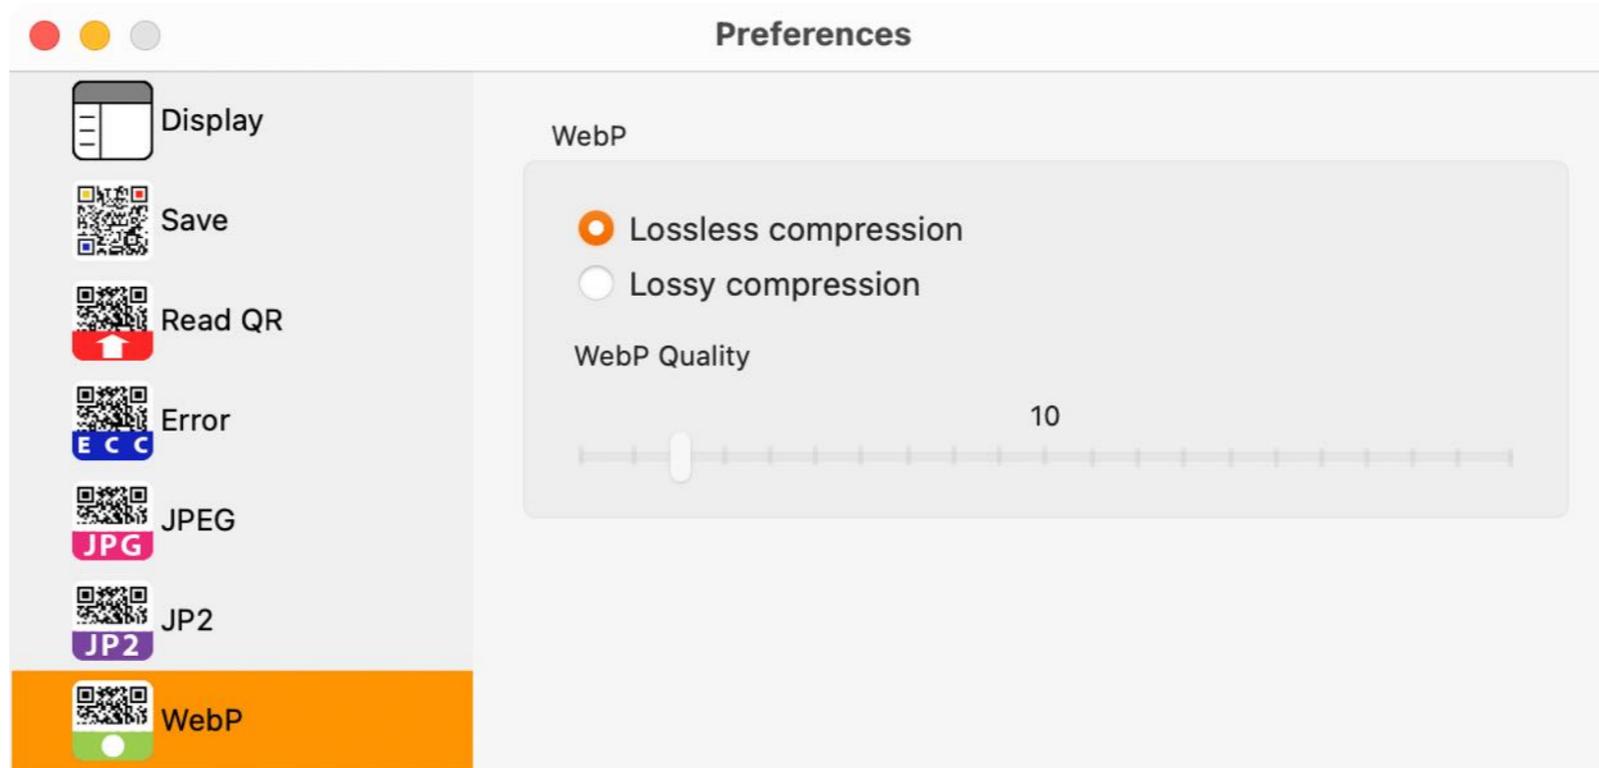

JP2

Here you can set the JPEG2000 quality for export.

WebP

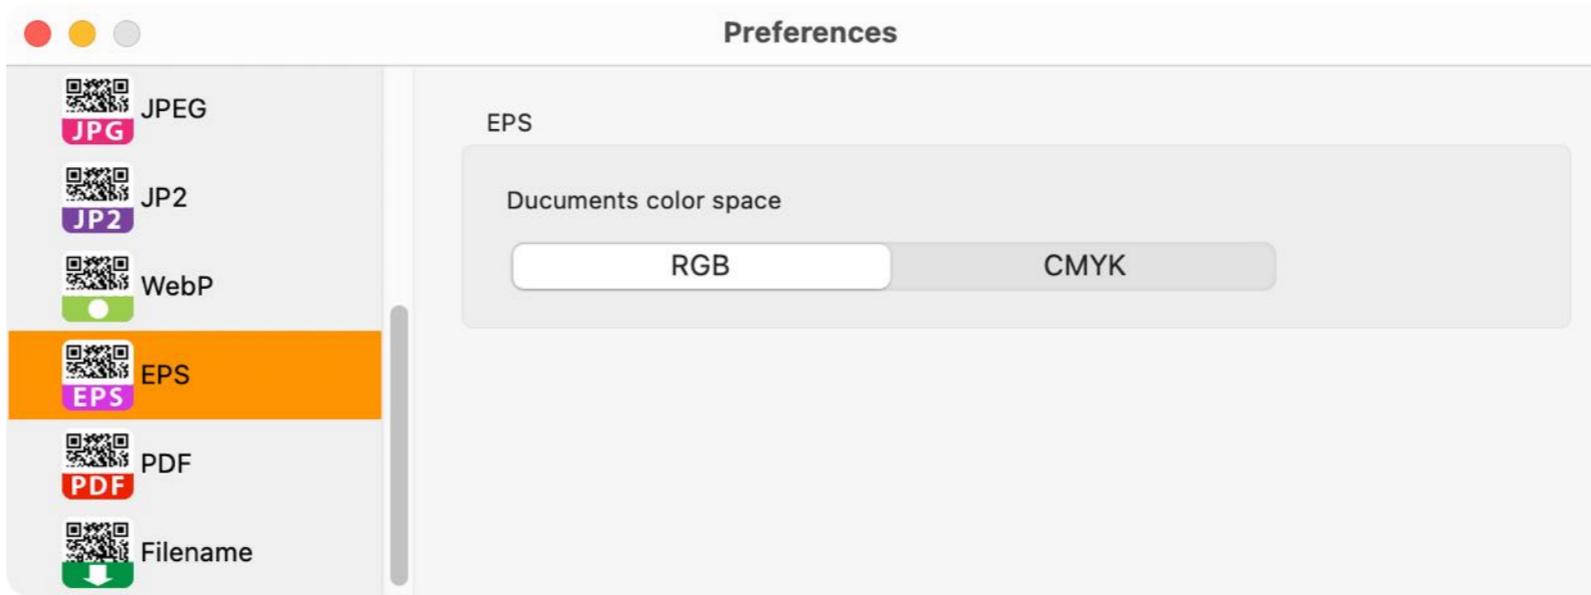

Here you can set the WebP quality for export.

PREFERENCES

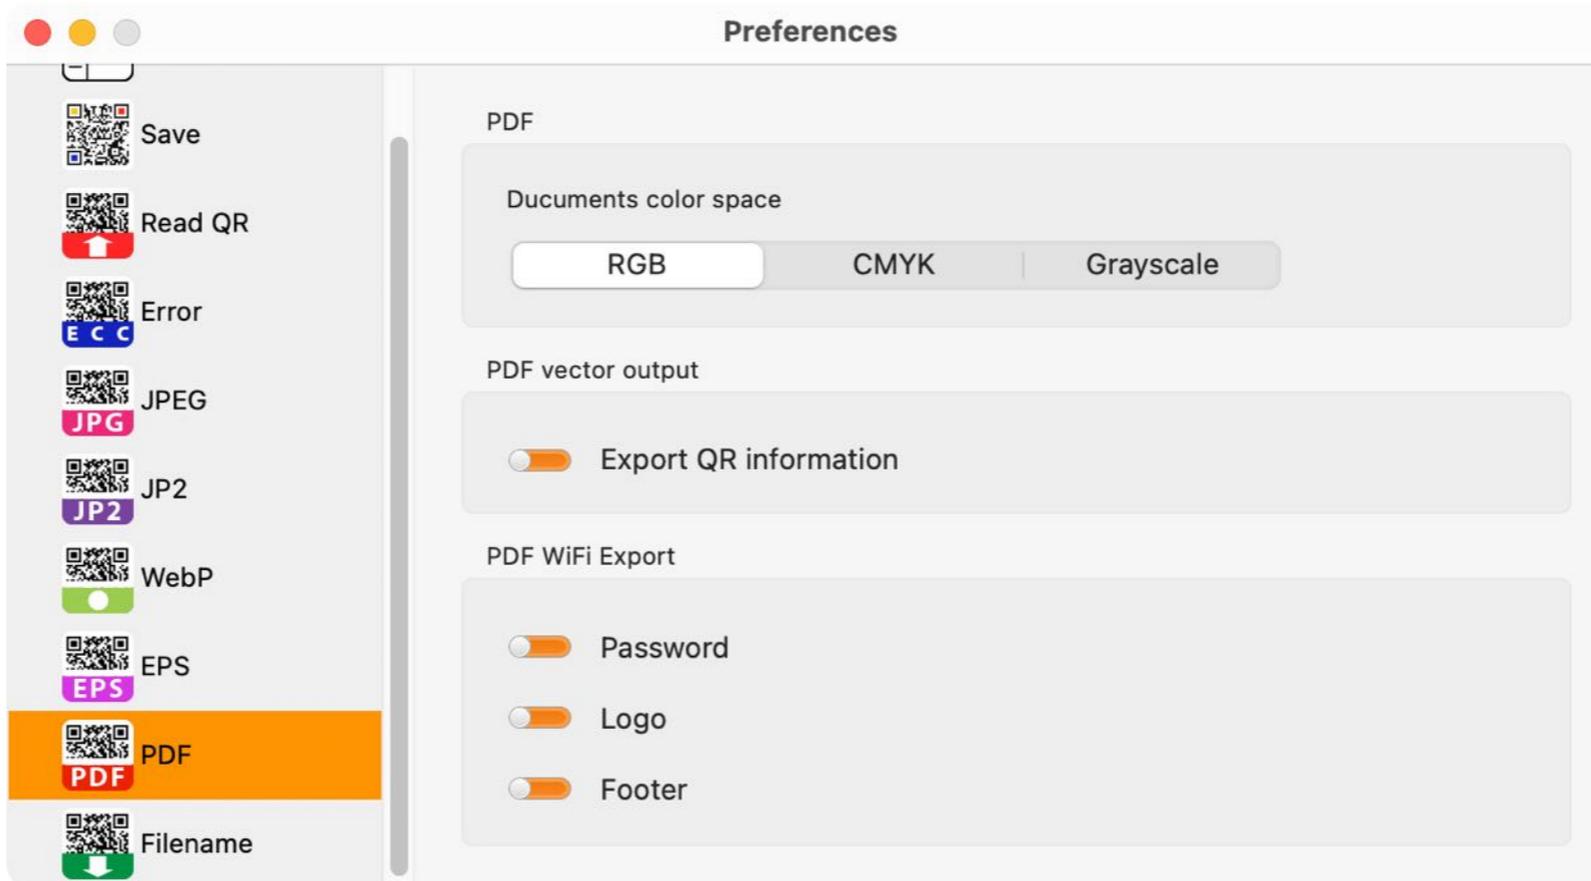

EPS

Here you can set the color space for the export in PDF format. The default setting here is "RGB".

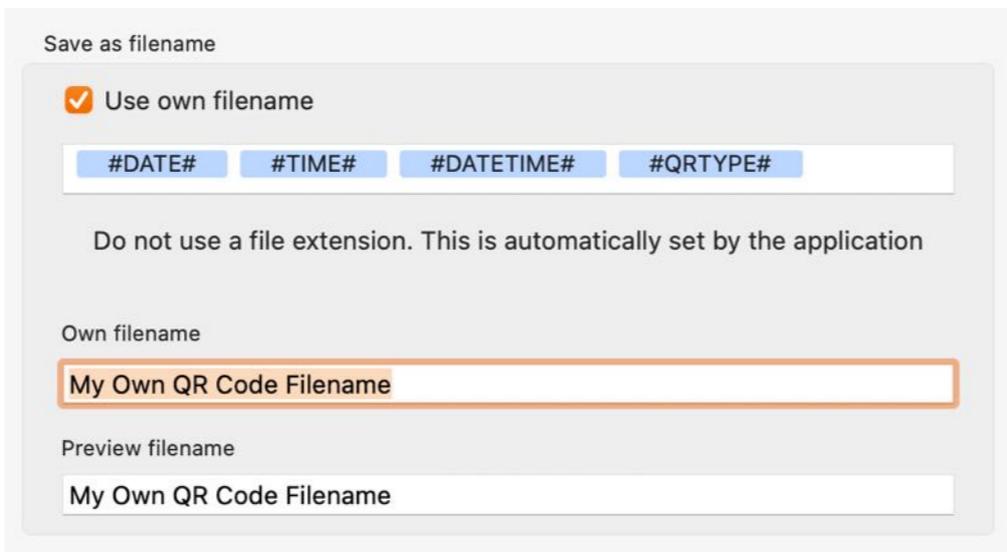

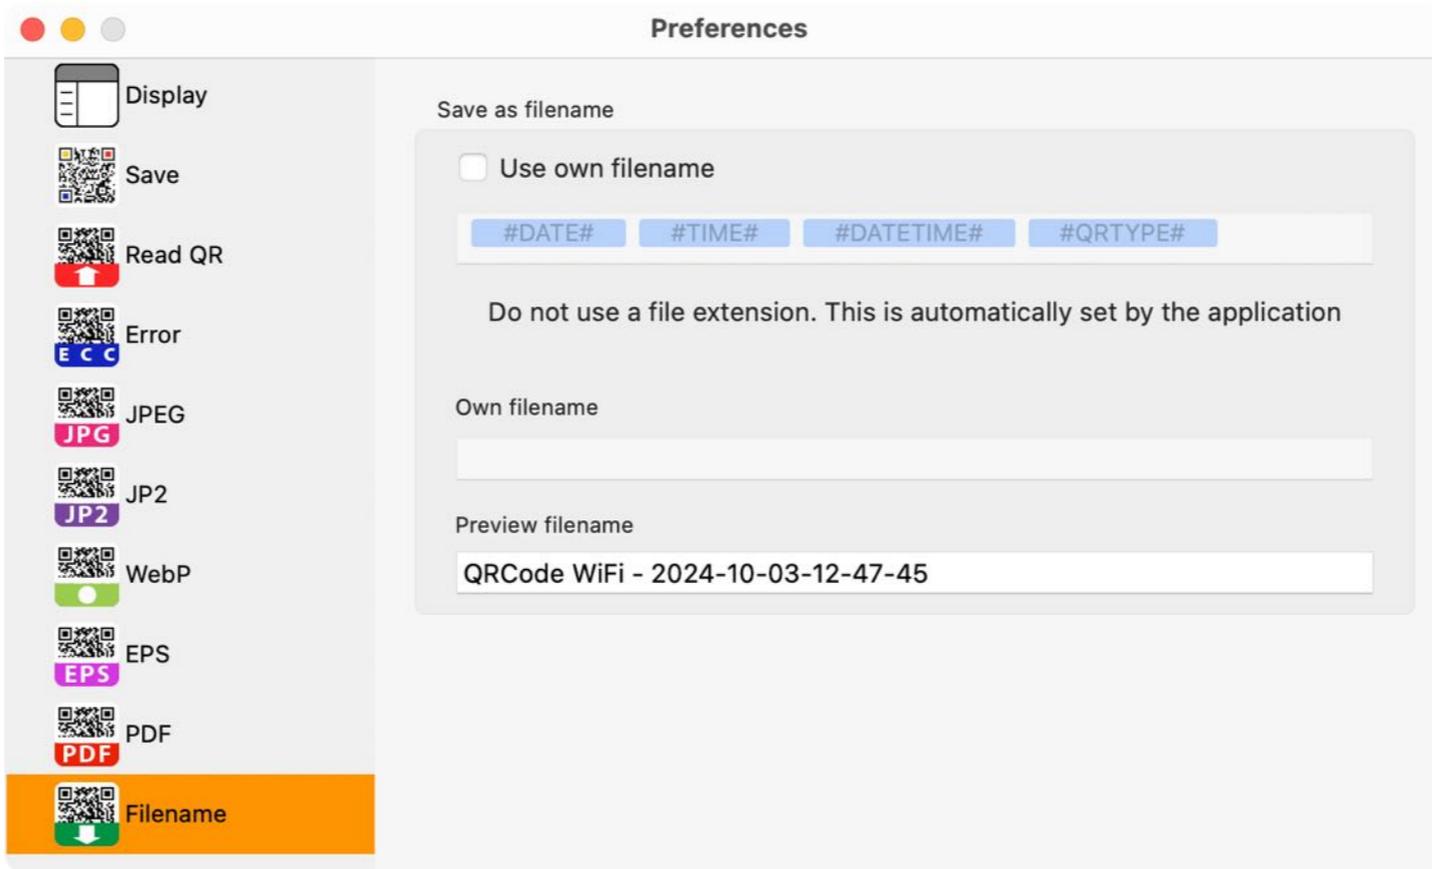

PDF

Here you can set the color space for the export in PDF format. The default setting here is "RGB". When exporting in PDF vector format, the color mode "Grayscale" is not supported and "CMYK" is used.

Filename

Here you can define the file name for the export. The blue fields are placeholders that can be dragged and dropped into the "Filename" field. At the bottom there is a preview of the file name.
